The Unfinished Revolution Michael L. Dertouzos, 2002-10-08 In a world spiralling into a state of technological excess, Michael Dertouzos shows us how to make technology—in all its infinite varieties—work for, rather than against, us in our everyday business lives. Now includes a new foreword by Tim Berners-Lee, inventor of the World Wide Web. At its core, Dertouzos' manifesto is this: Simplify the use of technology to the point where it works FOR us rather than having it dictate the way we live and work. This book is about getting to the point where computer fads give way to a true Information Revolution. To get there, we must abandon our current preoccupation with machine complexities and set a goal that is as simple as it is powerful: Information technology should help people do more by doing less. Dertouzos offers a look at the future and place of technology in everyday life: Where would a world of truly easy to use technology lead the human race? How might people change their way of life and work, their politics, their self perception and their quest for the meaning of life in such an environment?

Human Centered Computing Yong Tang, Qiaohong Zu, José G. Rodríguez García, 2019-03-21 This book constitutes thoroughly reviewed, revised and selected papers from the 4th International Conference on Human Centered Computing, HCC 2018, held in Merida, Mexico, in December 2018. The 50 full and 18 short papers presented in this volume were carefully reviewed and selected from a total of 146 submissions. They focus on a hyper-connected world, dealing with new developments in artificial intelligence, deep learning, brain-computing, etc.

This book discusses the topics of modern human centered computing and its applications. The book showcases the fusion of human sciences (social and cognitive) with computer science (human-computer interaction, signal processing, machine learning, and ubiquitous computing).

Frontiers of Human-Centered Computing, Online Communities and Virtual Environments Rae Earnshaw, Richard Guedj, Andries Van Dam, John Vince, 2012-12-06 Rae Earnshaw and John A. Vince -- . . ---- 1 Introduction The US President's Information Technology Advisory Committee (PITAC) recently advised the US Senate of the strategic importance of investing in IT for the 21st century, particularly in the areas of software, human-computer interaction, scalable information infrastructure, high-end computing and socioeconomic issues [1]. Research frontiers of human-computer

interaction include the desire that interaction be more centered around human needs and capabilities, and that the human environment be considered in virtual environments and in other contextual information-processing activities. The overall goal is to make users more effective in their information or communication tasks by reducing learning times, speeding performance, lowering error rates, facilitating retention and increasing subjective satisfaction. Improved designs can dramatically increase effectiveness for users, who range from novices to experts and who have diverse cultures with varying educational backgrounds. Their lives could be made more satisfying, their work safer, their learning easier and their health better.

Human Centered Computing Qiaohong Zu,Bo Hu,2018-02-01 This book constitutes revised selected papers from the thoroughly refereed proceedings of the Third International Human Centered Computing Conference, HCC 2017, that consolidated and further develops the successful ICPCA/SWS conferences on Pervasive Computing and the Networked World, and which was held in Kazan, Russia, in August 2017. The 48 full and 20 short papers presented in this book together with 2 invited keynotes were carefully reviewed and selected from numerous submissions. This proceedings present recent advances in human machine interfaces, wireless and mobile network technologies, and data analytics, which make computer services truly human-centric.

Collected Essays on Human-Centered Computing, 2001-2011 Robert R. Hoffman,2012-09 The nexus of computer science and cognitive science will remain a fruitful area for research and reflection. Humans, computers, and their context form a trinity that will require the sort of insight that these essays embody. If we are to realize the promise of intelligent systems in all their forms, we will need the concepts, methods, and reflections contained in this book. --Nigel Shadbolt, University of Southampton, from the Foreword The notion of Human-Centered Computing (HCC) was introduced as a named program at the NASA-Ames Research Center. Both the evolution of HCC and its current theoretical and research foundations are laid out in the essays that are compiled into this volume. HCC, from this perspective, has the goal of creating technologies that amplify and extend human perceptual, cognitive, and collaborative capabilities. With contributions from more than three dozen coauthors, these 40 essays from the Human-Centered Computing department of IEEE Intelligent Systems lay out and clarify the principles of HCC.
