Roleplaying Games in the Digital Age Stephanie Hedge, Jennifer Grouling, 2021-03-08 The Digital Age has created massive technological and disciplinary shifts in tabletop role-playing, increasing the appreciation of games like Dungeons & Dragons. Millions tune in to watch and listen to RPG players on podcasts and streaming platforms, while virtual tabletops connect online players. Such shifts elicit new scholarly perspectives. This collection includes essays on the transmedia ecology that has connected analog with digital and audio spaces. Essays explore the boundaries of virtual tabletops and how users engage with a variety of technology to further role-playing. Authors map the growing diversity of the TRPG fandom and detail how players interact with RPG-related podcasts. Interviewed are content creators like Griffin McElroy of The Adventure Zone podcast, Roll20 co-creator Nolan T. Jones, board game designers Nikki Valens and Isaac Childres and fan artists Tracey Alvarez and Alex Schiltz. These essays and interviews expand the academic perspective to reflect the future of role-playing.

Navigating Imaginary Worlds Mark J.P. Wolf, 2025-06-16 This edited anthology offers a collection of essays that each look at various types of wayfinding. Together they explore a variety of wayfinding tools and techniques and their applications, as well as ways of keeping track of the construction of worlds too. With transmedial worlds extending over multiple media, multiple authors, and sometimes even multiple decades of creation, a wealth of different issues can arise; worlds need to direct audience members into how to organize them conceptually. Edited by Mark J. P Wolf and featuring contributions from a distinguished set of authors from interdisciplinary backgrounds, this book enriches the theory, history, and practice of world-building, through the exploration of navigation. The essays have many overlapping concerns and together they provide the reader with a range of discussions regarding wayfinding and the many ways it intersects with world-building - and world-experiencing - activities. Thus, rather than just analyzing worlds themselves, the anthology also asks the reader to consider analyzing the act of world-building itself. This collection will be of interest to students and scholars in a variety of fields including Subcreation Studies, Transmedia Studies, Popular Culture, Comparative Media Studies, Video Game Studies, Film Studies, and Interdisciplinary Literary Studies.

Esports in Higher Education George S. McClellan, Ryan S. Arnett, Charles M. Hueber, 2023-07-03 This comprehensive resource examines the rapidly-growing esports phenomenon in higher education, bringing the perspectives of players, administrators, and scholars together in one volume to discuss the basics of esports, how to start and maintain successful

esports programs, and issues and trends in the field. Esports are a global phenomenon with an estimated audience of 400 million people in 2018. Given their already strong base and rising popularity on college campuses, esports have been referred to as the new college football. This book offers practical insights into how to develop and maintain an esports program that is consistent with institutional purposes and values. The book is helpful to all types of institutions (small to large, public and private, 2-year or 4-year). It draws on current scholarship and the professional experience of the authors, focused heavily on practical advice for higher education professionals. Among the challenges of esports in higher education the book addresses are competition structure, competition climate, child protection, cheating, gambling, lack of reliable relevant data to inform decisions, and the advent of an esports arms race. Some of the opportunities described in the book include student recruitment and success networks with high schools, and partnerships with the esports industry. Done correctly, esports can provide a structured way for all students (on campus, off campus, and online) to engage in both curricular and cocurricular programming that can provide measurable learning outcomes and have a positive impact on retention rates.

Service Provision Kenneth J. Turner, Evan H. Magill, David J. Marples, 2005-01-28 This book provides the first overview of the service technologies available to telecoms operators working in a post-convergence world. Previous books have focused either on computer networks or on telecoms networks. This is the first to bring the two together and provide a single reference source for information that is currently only to be found in disparate journals, tool specifications and standards documents. In order to provide such broad coverage of the topic in a structured and logical fashion, the book is divided into 3 parts. The first part looks at the underlying network support for services and aims to explain the technology that makes the user-visible services possible. This section covers multimedia networking, both traditional (legacy) and future (softswitch) call processing, intelligent networks, the Internet, and Wireless networks. Part 2 deals with how these services may be analysed and managed. Chapters cover topics such as commercial issues, service management, quality of service, security, standards and APIs. Part 3 concludes the book by looking ahead at evolving technologies and more speculative possibilities, discussing the kinds of services that may be possible in the future and the technologies that will support them. * Focuses is on how the technology supports the services, rather than on technology for its own sake * Contributors drawn from both academia and industry (companies such as Marconi, BT, Telcordia, Cisco, Analysys) to give both theoretical and real-world perspectives * Unique single-reference source for a wide range of material currently found only in disparate papers, specs and documentation * Covers brand new technologies such as JAIN, JTAPI, Parlay, IP, multimedia networking, active networks, WAP, wireless LANs, agent-based services, etc.
