Energy Efficiency in Buildings José Manuel Andújar, Sergio Gómez Melgar, 2020-04-28 Buildings are one of the main causes of the emission of greenhouse gases in the world. Europe alone is responsible for more than 30% of emissions, or about 900 million tons of CO₂ per year. Heating and air conditioning are the main cause of greenhouse gas emissions in buildings. Most buildings currently in use were built with poor energy efficiency criteria or, depending on the country and the date of construction, none at all. Therefore, regardless of whether construction regulations are becoming stricter, the real challenge nowadays is the energy rehabilitation of existing buildings. It is currently a priority to reduce (or, ideally, eliminate) the waste of energy in buildings and, at the same time, supply the necessary energy through renewable sources. The first can be achieved by improving the architectural design, construction methods, and materials used, as well as the efficiency of the facilities and systems; the second can be achieved through the integration of renewable energy (wind, solar, geothermal, etc.) in buildings. In any case, regardless of whether the energy used is renewable or not, the efficiency must always be taken into account. The most profitable and clean energy is that which is not consumed.

Green Home Building Miki Cook, Doug Garrett, 2014-09-01 A comprehensive guide to building green on any budget. According to conventional wisdom, building a green home is an expensive endeavor. The standard approach treats green as an add-on, tacking premium products, finishes, and equipment onto a traditional home design. As a result, many green home projects end up over budget or fail to achieve their environmental and performance goals. Green Home Building explodes the myth that green homes have to cost more. Using proven methods based on applied building science, the authors show how to: Lower base construction costs to provide funding for high performance upgrades Achieve a net-zero energy home, including zero-ing water, waste, carbon, and associated costs within fifteen years Live affordably into the future, despite

anticipated rising costs for fuel, water, materials, taxes, and health care This comprehensive guide to building green on any budget defines the strategies that maximize the return on green investments. Written for anyone who has ever been swayed by the argument that the price tag limits how green a home can be, Green Home Building is a must-read for builders, contractors, architects, designers, and homeowners. Miki Cook is a green building and sustainability consultant who has dedicated her career to educating contractors and the public on the strategies, methods, and benefits of green homes. Doug Garrett has trained thousands of homebuilders, architects, and sub-contractors to build energy-efficient homes using applied building science to improve comfort, durability, and healthfulness while meeting or exceeding the energy code.

Builder's Guide to Mixed/Humid Climates Joseph W. Lstiburek, 2005 The Builder's Guide provides the building industry with the latest and best practical information on how to apply building science principles to structures as systems in mixed-humid climate regions.--Publisher's website.

The Dynamics of Corporate Social Responsibility Maria Aluchna, Samuel O. Idowu, 2016-12-27 This book explores recent developments in the theory, strategic perspective and international practice of corporate social responsibility. In particular it discusses the consequences of the economic slowdown apparent in many economies and the impact of changes in the regulatory environment. It consists of three parts: Part one addresses a variety of theoretical approaches as well as the dynamics and criticism of corporate social responsibility. It takes into account social and governmental expectations for the new and extended role of companies in the economy and in society, and provides a new context and theoretical assumptions regarding the functions and tasks of corporate social responsibility. Part two discusses the practical aspects relating to strategic management and corporate governance, corporate disclosure and reporting, as well as the empowerment of

stakeholders. Lastly, part three focuses on the international practice of corporate social responsibility in various organizational and institutional settings. Using numerous case studies, the book explores the challenges and tasks of CSR in emerging markets, in the fashion industry and in global and family companies. It identifies the changes that can be detected following the financial crisis, closing the loop and linking the empirical findings with the revised theoretical framework.

Managing Water Under Uncertainty and Risk: United Nations World Water Development Report #4 (3 Vols.)

UNESCO, 2012-01-01 Released every three years since March 2003, the United Nations World Water Development Report (WWDR), a flagship UN-Water report published by UNESCO, has become the voice of the United Nations system in terms of the state, use and management of the world's freshwater resources. The report is primarily targeted at national decision-makers and water resource managers, but is also aimed at educating and informing a broader audience, from governments to the private sector and civil society. It underlines the important roles water plays in all social, economic and environmental decisions, highlighting policy implications across various sectors, from local and municipal to regional and international levels. Similarly to the first two editions, this report includes a comprehensive and up-to-date assessment of several key challenge areas, such as water for food, energy and human health, and governance challenges such as institutional reform, knowledge and capacity-building, and financing, each produced by individual UN agencies.

Innovative Collaboration in Healthcare Hironobu Matsushita, Carole Orchard, 2025-01-23 This book is the first to approach collaboration in healthcare from a translational systems science perspective. There is a complex intertwining of collaborative relationships between diverse sectors, industries, universities, professions, teams, patients, and machines and robots powered by artificial intelligence and big data. Innovative collaboration is evolving both in the real world and in the virtual space of the Internet. While respecting patient-centeredness, collaboration is required in various settings and under different contexts such as hospitals, communities, use of new technology development, integrating industry academia-hospital-government relationships, through interprofessional approaches. However, it is only recently that “collaboration” in health professions has begun to be researched and discussed scientifically. The purpose of this book is to review and recapture “innovative collaboration” in modern healthcare, primarily from the perspective of translational systems science. To attain our goal, the authors have prepared three unique perspectives. The first is interprofessional collaboration. The elegance, sturdiness, and resilience of the tapestry depend heavily on cooperation between professions and the multisector. The second angle is patient-centeredness. In recent years, “patient-centeredness” has become an established motto, but to what extent is patient-centeredness, including ethics, realized in collaboration? We would like to introduce advanced

approach. The third perspective is man-machine collaboration. Collaboration with robots and sensor systems connected to artificial intelligence and big data is becoming more common in all aspects of healthcare. While introducing advanced cases, the authors would like to critically analyze the ethics and conflicts that tend to hide behind the scenes.

Financial Management and Accounting in the Public Sector Gary Bandy, 2023-03-14 The importance of public financial management for the health and wellbeing of citizens became dramatically apparent as governments sought to respond to the coronavirus pandemic in 2020. Now, governments and other public sector organizations face the challenge of recovering from the pandemic whilst also seeking to achieve Sustainable Development Goals, with squeezed budgets and ever-increasing demands for public services. Public sector managers are confronted daily with targets and demands that are often set in confusing accounting and financial language. In *Financial Management and Accounting in the Public Sector*, Gary Bandy employs a clear and concise narrative to introduce the core concepts of public financial management to help those managers to deliver programmes, projects and services that are value for money. As the author puts it, managing public money is an art, not a science. This third edition has been revised and updated throughout, offering: a structure that is more clearly linked to the stages of the public financial management cycle greater coverage of transparency and accountability issues a broader view of public procurement to include goods, works and services and effective contract management; and an increased focus on public spending in the context of a post-COVID environment. With a glossary of terms to help managers understand and be understood by accountants, as well as learning objectives, discussion questions and exercises, this practical textbook will help students of public management and administration to understand the financial and accounting aspects of managing public services.

Managing Water Under Uncertainty and Risk Unesco,2012 This flagship report is a comprehensive review that gives an overall picture of the world's freshwater resources. It analyses pressures from decisions that drive demand for water and affect its availability. It offers tools and response options to help leaders in government, the private sector and civil society address current and future challenges. It suggests ways in which institutions can be reformed and their behaviour modified, and explores possible sources of financing for the urgently needed investment in water. The WWDR4 is a milestone within the WWDR series, reporting directly on regions and highlighting hotspots, and it has been mainstreamed for gender equality. It introduces a thematic approach - 'Managing Water under Uncertainty and Risk' - in the context of a world which is changing faster than ever in often unforeseeable ways, with increasing uncertainties and risks. It highlights that historical experience will no longer be sufficient to approximate the relationship between the quantities of available water and shifting future demands. Like the earlier editions, the WWDR4 also contains country-level case studies describing the progress made in meeting water-related objectives. The WWDR4 also seeks to show that water has a central role in all aspects of economic development and social welfare, and that concerted action via a collective approach of the water-using sectors is needed to ensure water's many benefits are maximized and shared equitably and that water-related development goals are achieved.
