Nursing Care Plans with Critical Thinking Questions reinforce the nursing process and strengthen problem-solving skills as applied to maternity nursing. Logical organization of content from simple-to-complex and health-to-illness makes locating and accessing information easy. Key terms with phonetic pronunciations and text page references help improve terminology and language skills of English-as-a-Second-Language (ESL) students and students with limited proficiency in English, before they enter clinical practice. Health Promotion boxes emphasize the importance of family-centered care, health promotion and illness prevention, women's health issues, and growth and development of child and parent to help you understand and teach wellness and disease prevention to patients in your care. Nutrition content highlights the importance of proper nutrition for women before, during, and after pregnancy (for those who are breastfeeding), as well as critical information about the nutrition needs and problems of newborns, infants, and children. Nursing Tips throughout provide pertinent information applicable in the clinical setting that reinforces what you have just learned while building on previously learned information. NEW! Unfolding case studies with illustrations follow first-time parents Tess and Luis throughout the stages of pregnancy and birth of their twins, with a series of critical thinking questions. NEW! Updated NCLEX exam-style review questions have been revised to a higher cognitive level to better reflect the NCLEX examination. NEW! Expanded coverage of bioterrorism and natural disasters better reflects the evolving role of the nurse in disaster situations. NEW! Enhanced appendix includes Pediatric Lab Values for quick and easy reference.

Drowning by Accident Elizabeth Meinhard, 2022-02-15 Drowning By Accident explains why it is so easy to drown, where accidents happen, and how to save lives by early rescue and resuscitation. More than 600 people die by drowning in Britain every year. Swimming is promoted as a particularly safe form of exercise, so that swimmers forget or ignore the dangers of frigid lakes, swollen rivers, incoming tides or outgoing rip currents. Drowning accidents take place because we don't recognise water as a hostile environment. We overestimate the strength and endurance of our bodies and underestimate the power and deceptiveness of water. Year after year, victims lose their lives in typical drowning accidents, often sinking so quickly and silently that nearby family, friends and onlookers fail to notice the tragedy taking place close beside them. Babies drown in baths. Toddlers drown in garden ponds. School children fall off rafts. Teenagers strike too far from the shore. Pensioners wade into rivers to save their dogs. Victims often die within minutes of sinking beneath the surface. A quarter of those who reach hospital alive will also die, while others survive with severe permanent brain damage. This means that it is vitally important for parents, grandparents, teachers, lifeguards and lawmakers to recognise the risks and prevent drowning accidents before they take place.
