Chicago (Ill.). Department of Health

The Taste of Sweet Joanne Chen, 2008-03-18 Dismissed as déclassé by gourmands, blamed for the scourge of obesity, and yet loved by all, the taste of sweet has long been at the center of both controversy and celebration. For anyone who has ever felt conflicted about a cupcake, this is a book to sink your teeth into. In *The Taste of Sweet*, unabashed dessert lover Joanne Chen takes us on an unexpected adventure into the nature of a taste you thought you knew and reveals a world you never imagined. Sweet is complicated, our individual relationships with it shaped as much by childhood memories and clever marketing as the actual sensation of the confection on the tongue. How did organic honey become a luxury while high-fructose corn syrup has been demonized? Why do Americans think of sweets as a guilty pleasure when other cultures just enjoy them? What new sweetener, destined to change the very definition of the word sweet, is being perfected right now in labs around the world? Chen finds the answers by visiting sensory scientists who study taste buds, horticulturalists who are out to breed the perfect strawberry, and educators who are researching the link between class and obesity. Along the way she sheds new light on a familiar taste by exploring the historical sweetscape through the banquet tables of emperors, the pie safes of American pioneers, the corporate giants that exist to fulfill our every sweet wish, and the desserts that have delighted her throughout the years. This fabulously entertaining story of sweet will change the way you think about your next cookie.

The Handbook of Multisensory Processes Gemma Calvert, Charles Spence, Barry E. Stein, 2004 Research is suggesting

that rather than our senses being independent, perception is fundamentally a multisensory experience. This handbook reviews the evidence and explores the theory of broad underlying principles that govern sensory interactions, regardless of the specific senses involved.

Taste Chemistry R.S. Shallenberger, 1993 A text examining and elaborating on the meaning of the established premise that taste is a chemical sense. In particular, it considers the degree to which chemical principles apply to phenomena associated with the inductive (recognition) phase of taste; describes the structure and properties of compounds of varying tastes that allow the nature of the recognition chemistry and the nature of the receptors for different tastes to be postulated; and includes interdisciplinary observations that may be applied to the solution of problems related to the chemical nature of taste. The largest portion of the text is directed toward sweetness. Includes a glossary with definitions of stereochemical and other terms, with the definitions cross-referenced to the text.
