Desenredando la ciencia Natalia Buacar, 2022-04-01 Vivimos en un mundo en el cual la ciencia tiene un lugar protagónico tanto en nuestra vida cotidiana como en aspectos alejados de ella para nuestra percepción pero que, aun así, impactan en la realidad que vivimos. La propuesta de estas páginas es recorrer algunos interrogantes sobre aquello que llamamos ciencia, partiendo desde esa misma problematización, y sobre las vías posibles para entenderla. Si bien los objetos que aborda este libro no están exentos de complejidad se procura mantener un lenguaje llano y ameno que permita el mayor alcance posible de su propuesta.

**El trabajo en argumentación** Andrade Uribe, Schumann Javier, 2023-01-09 Saber argumentar y plantear puntos de vista claros y defendibles no es solo importante en el ámbito académico, sino también en la cotidianidad. En este sentido, este manual resulta de gran utilidad para quienes buscan trabajar en su argumentación. Teniendo esto en cuenta, el libro está dividido en dos partes para que su lector 1) aprenda a identificar, comprender y evaluar argumentos a través de tres relaciones: lógica-dialéctica, lógica-retórica y dialéctica-retórica; y 2) revise la robustez de los argumentos mediante el recurso de los esquemas y evalúe la eficacia de los argumentos a través del análisis de textos académicos, de periódicos o de revistas. Además, en todo el manual se presentan diferentes tipos de argumentos y sus características en circunstancias de uso diario para que el lector se familiarice con este tema.

*Fundamentos de filosofía de la ciencia* José A. Díez, C. Ulises Moulines, 2008 Fundamentos de filosofía de la ciencia es una obra de carácter general destinada principalmente a servir de guía a alumnos y profesores en la enseñanza universitaria de esta disciplina, en especial para los estudios de Filosofía, pero también para los de Humanidades y Ciencias Humanas y Naturales. La obra está estructurada en diferentes niveles para facilitar su utilización como libro de texto, tanto en cursos introductorios generales como en seminarios específicos. Aunque el público universitario es su principal destinatario, se ha concebido para que cualquier lector interesado en la disciplina y con determinados conocimientos previos pueda acceder, con provecho, a las diversas partes de la misma. Ha diferencia de la mayoría de introducciones a la Filosofía de la Ciencia, la orientación de esta obra no es histórica sino temática, cubriendo los diferentes ámbitos conceptuales de la disciplina. Su contenido, dado que su finalidad es presentar los fundamentos de la materia, se centra en los grandes temas clásicos de la disciplina. El núcleo temático lo conforma la triada conceptos-leyes-teorías en torno a cuyos componentes se presentan los restantes temas: contrastación de hipótesis, medición, explicación, relaciones interteóricas, el problema de la inducción y el cambio teórico. En tanto que introducción general de la disciplina, en esta obra no se pretende ninguna tesis metacientífica o metafilosófica sustantiva, sino exponer de forma clara los principales problemas filosóficos que plantea la actividad científica y discutir las diferentes aproximaciones a los mismos.
