The I-Series Microsoft Office Excel 2003 Complete Stephen Haag,James T. Perry,2003-12 The I-Series leads the student through clear, error-free, and unambiguous steps to accomplish tasks that produce a finished document, work sheet or database table. The approach is not simply results-oriented; teaching how to accomplish a task is not enough for complete understanding and mastery. Prior to introducing steps, the authors discuss why each step is important and what roll all the steps play in the overall plan for creating a document, workbook or database. The I-Series Applications textbooks strongly emphasize that students learn and master applications skills by being actively engaged by doing.

Foundations of Real Estate Financial Modelling Roger Staiger, 2015-04-10 *Foundations of Real Estate Financial Modelling* is specifically designed to provide an overview of pro forma modelling for real estate projects. The book introduces students and professionals to the basics of real estate finance theory before providing a step-by-step guide for financial model construction using Excel. The idea that real estate is an asset with unique characteristics which can be transformed, both physically and financially, forms the basis of discussion. Individual chapters are separated by functional unit and build upon themselves to include information on: Amortization Single-Family Unit Multi-Family Unit Development/Construction Addition(s) Waterfall (Equity Bifurcation) Accounting Statements Additional Asset Classes Further chapters are dedicated to risk quantification and include scenario, stochastic and Monte Carlo simulations, waterfalls and securitized products. This book is the ideal companion to core real estate finance textbooks and will boost students Excel modelling skills before they enter the workplace. The book provides individuals with a step-by-step instruction on how to construct a real estate financial model that is both scalable and modular. A companion website provides the pro forma models to give readers a basic financial model for each asset class as well as methods to quantify performance and understand how and why each model is constructed and the best practices for repositioning these assets.

Combined Plithogenic Hypersoft Sets in Decision Making on Supplier Selection with Different MCDM Approaches

Sikkanen Sudha, Ravi Priya, Nivetha Martin, Said Broumi, Florentin Smarandache, Decision making methods integrated with Plithogenic sets are highly feasible and resilient in designing optimal solutions. This research work identifies the research gaps of limited applications of combined plithogenic hypersoft sets (CPHSS) and hence proposes a supplier selection decision problem with an integrated approach combining CPHSS with MCDM methods. A generalized form of Plithogenic accuracy function is used in determining the plithogenic accuracy matrix to which the prominent ranking methods of TOPSIS, ELECTRE, VIKOR and MAIRCA are applied. The proposed hybrid decision approach is illustrated using supplier selection decision problem as a case study. The ranking results are compared with normal and combined plithogenic hypersoft sets.

The sensitivity analysis performed exhibits the efficacy of combined plithogenic hypersoft sets in representing the realistic data. This integrated decision framework contributes to Plithogenic applications of handling complex decision systems.

Modeling the World in a Spreadsheet Timothy John Cartwright, 1993 Until recently, simulation modeling was regarded as the domain of powerful computers and highly skilled programmers. But that is no longer the case. Thanks to the spreadsheet, simulation modeling is now accessible to anyone with a microcomputer: students and teachers, public officials, engineers and planners, and ordinary citizens concerned about the environment. In *Modeling the World in a Spreadsheet*, Timothy Cartwright explains how to create models of different environmental phenomena -- ranging from natural processes such as the dispersion of water and air pollution to social processes such as housing affordability. He also describes models for some of the most exciting topics in current computer research, including artificial life, cellular decision-making, and chaos and fractals. Written for both experts and nonexpert, the book provides complete recipes for building and running the models in the most popular spreadsheet programs, such as Lotus 1-2-3, SuperCalc, Excel, Quatro, and others. A 3 diskette containing Lotus or SuperCalc data files for all fourteen models may be ordered using a tear-out card that accompanies the book (spreadsheet software is required).
