Depressor Septi Nasi Muscle Resection Or Nerve Block Daniel G. Moina, 2016 In our daily practice, we usually perform the rhinoplasty without considering the dynamic functions. The depressor septi nasi muscle (DSNM) is very important in nose dynamics. Its hyperactivity in some rhinoplasty patients while they smiling or speaking causes a deformity that includes drooping of the nasal tip, elevation and shortening of the upper lip, and increased maxillary gingival show. The dissection of the depressor septi muscle during rhinoplasty can improve the tip-upper lip relationship in appropriately selected patients.

Cutaneous Flaps in Head and Neck Reconstruction Vasilios K. Thomaidis, 2014-05-21 This textbook, containing a plethora of illustrations and pictures, will serve as an atlas and as a superb guide to the use of cutaneous flaps in head and neck reconstruction. Each chapter depicts, in a layered manner, the anatomy of a particular donor site from which flaps are derived and used in head and neck defects, providing systematic steps in understanding the topographical anatomy of the various tissue layers. The flaps derived from each donor site are presented in detail, with step-by-step instructions in flap design and harvesting techniques based in anatomy. The author uses numerous high-quality color illustrations drawn from his own practice in order to demonstrate the techniques. His combined expertise as a maxillofacial surgeon and an assistant professor of anatomy enables him to explain clearly the transition from basic science anatomy to applied anatomy and to document reconstructive surgical techniques in precise detail. This beautifully illustrated book, including many basic and advanced flap designs, will be an illuminating reference for all who treat defects in the head and neck area.

An Atlas of Human Anatomy for Students and Physicians Carl Toldt, 1904

The Muscular System Manual Joseph E. Muscolino, 2005 A full-color atlas of the muscles of the human body, this text provides in-depth coverage of skeletal muscles. An easy-to-understand format organizes the material by body region, moving

from head to extremities. For each region, there is an overview of the muscles of the region as a whole, with information on how muscles in that region function together and large drawings of the muscles of that entire region. Then each particular muscle in that region is described with name, the origin of that name, Greek and Latin derivations, pronunciation, attachments, actions, a drawing with an arrow showing the muscle's line of pull, innervation to two levels of detail, and arterial supply to two levels of detail. That overview is followed by a practical, step-by-step guide to palpating that muscle, a group muscle illustration to show the muscle's anatomical relationship to nearby muscles, the methodology for learning muscle actions, and clinically useful information for that muscle. Instructor's resources available.
