**Planet Claire, Suite for Cello and Sad-Eyed Lovers** Jeff Porter,2021-01-05 The second installment in Ann Hood's Gracie Belle imprint challenges the traditional solemnity that characterizes nonfiction books of grief, loss, and sorrow. "Few readers will fail to be gripped by this tragically common story about death and what comes after for those left behind . . . A haunting and thought-provoking consideration of death and 'how utterly it rips apart our lives.'" —Kirkus Reviews, Starred Review Planet Claire is the story of the untimely death of the author's wife and his candid account of the following year of madness and grief. As his life unravels, Porter analyzes his sadness with growing interest. He talks to Claire as if to evoke a presence, to mark a space for memory. He reports on his daily walks and shares observations of life's sadness, while reminiscing about various moments in their life together. Like Orpheus, the author searches for a lost love, and what he finds is not the dog of doom but flashes of an intimate symmetry that brighten the darkest places of sorrow. The second title from Ann Hood's Gracie Belle imprint, Planet Claire takes readers on a journey of sorrow that recalls memorable works by C.S. Lewis (A Grief Observed), Joan Didion (The Year of Magical Thinking), and Julian Barnes (Levels of Life). Porter's memoir,

however, is also playful, quirky, and self-ironic in a way that challenges the genre's traditional solemnity. Like the novel *Grief Is the Thing with Feathers* by Max Porter, this is an unpredictably funny account of heartbreak, as if to say there's something about the magnitude of loss that troubles even earnestness.

**Household Energy Use & Conservation** John Luetzelschwab,1980 The concepts of energy consumption in the home and calculation of energy usage are described for the homeowner, or the high school, college, or extension student. The application of energy conservation principles in the home begins with an analysis of use patterns based on understanding the basic operation of each appliance, and how it uses energy. The operating costs are then calculated to enable the householder to adjust energy use to save the maximum amount of energy with the minimum amount of inconvenience and discomfort. After an explanation of energy units, methods and equations are given for calculating costs of home heat and light, and all major appliances such as air conditioners, ovens, hot water heaters and televisions.
