

The Boy Who Invented Tv

Edwin Brit Wyckoff

The Boy who Invented Television Paul Schatzkin,2002 While the great minds of science, financed by the biggest companies in the world, wrestled with 19th century answers to a 20th century problem, Philo T. Farnsworth, age 14, dreamed of trapping light in an empty jar and transmitting it, one line at a time, on a magnetically deflected beam of electrons. Farnsworth was a farm boy from Rigby, Idaho, with virtually no knowledge of electronics when he first sketched his idea for electronic television on a blackboard for his high school science teacher. Fifteen years later, his teacher would recreate that sketch as part of his testimony in patent litigation between Farnsworth and the giant Radio Corporation of America. In 1930, Farnsworth was awarded the fundamental patents for modern television; but he had to spend the next decade fighting off challenges to his patents by the giant Radio Corporation of America and defending his vision against his own shortsighted investors who did not share his larger dream of scientific independence. *The Boy Who Invented Television* traces Farnsworth's guided tour of discovery, describing the observations he made in the course of developing and improving his initial invention and revealing how his unique insights brought him to the threshold of what could have been an even greater discovery -- clean, safe, and unlimited energy from controlled nuclear fusion. - Publisher.

The Boy Who Invented TV Kathleen Krull,2009-09-08 An inspiring true story of a boy genius. Plowing a potato field in 1920, a 14-year-old farm boy from Idaho saw in the parallel rows of overturned earth a way to “make pictures fly through the air.” This boy was not a magician; he was a scientific genius and just eight years later he made his brainstorm in the potato field a reality by transmitting the world’s first television image. This fascinating picture-book biography of Philo Farnsworth covers his early interest in machines and electricity, leading up to how he put it all together in one of the greatest inventions of the 20th century. The author’s afterword discusses the lawsuit Farnsworth waged and won against RCA when his high school science teacher testified that Philo’s invention of television was years before RCA’s.

The Boy Genius and the Mogul Daniel Stashower, 2002-05-07 The world remembers Edison, Ford, and the Wright Brothers. But what about Philo T. Farnsworth, the inventor of television, an innovation that did as much as any other to shape the twentieth century? That question lies at the heart of *The Boy Genius and the Mogul*, Daniel Stashower's captivating chronicle of television's true inventor, the battle he faced to capitalize on his breakthrough, and the powerful forces that resulted in the collapse of his dreams. The son of a Mormon farmer, Farnsworth was born in 1906 in a single-room log cabin on an isolated homestead in Utah. The Farnsworth family farm had no radio, no telephone, and no electricity. Yet, motivated by the stories of scientists and inventors he read about in the science magazines of the day, young Philo set his sights on becoming an inventor. By his early teens, Farnsworth had become an inveterate tinkerer, able to repair broken farm equipment when no one else could. It was inevitable that when he read an article about a new idea -- for the transmission of pictures by radio waves--that he would want to attempt it himself. One day while he was walking through a hay field, Farnsworth took note of the straight, parallel lines of the furrows and envisioned a system of scanning a visual image line by line and transmitting it to a remote screen. He soon sketched a diagram for an early television camera tube. It was 1921 and Farnsworth was only fourteen years old. Farnsworth went on to college to pursue his studies of electrical engineering but was forced to quit after two years due to the death of his father. Even so, he soon managed to persuade a group of California

investors to set him up in his own research lab where, in 1927, he produced the first all-electronic television image and later patented his invention. While Farnsworth's invention was a landmark, it was also the beginning of a struggle against an immense corporate power that would consume much of his life. That corporate power was embodied by a legendary media mogul, RCA President and NBC founder David Sarnoff, who claimed that his chief scientist had invented a mechanism for television prior to Farnsworth's. Thus the boy genius and the mogul were locked in a confrontation over who would control the future of television technology and the vast fortune it represented. Farnsworth was enormously outmatched by the media baron and his army of lawyers and public relations people, and, by the 1940s, Farnsworth would be virtually forgotten as television's actual inventor, while Sarnoff and his chief scientist would receive the credit. Restoring Farnsworth to his rightful place in history, *The Boy Genius and the Mogul* presents a vivid portrait of a self-taught scientist whose brilliance allowed him to capture light in a bottle. A rich and dramatic story of one man's perseverance and the remarkable events leading up to the launch of television as we know it, *The Boy Genius and the Mogul* shines new light on a major turning point in American history.
