Grammaticalization Scenarios from Europe and Asia Walter Bisang, Andrej Malchukov, 2020-09-21 This volume intends to fill the gap in the grammaticalization studies setting as its goal the systematic description of grammaticalization processes in genealogically and structurally diverse languages. To address the problem of the limitations of the secondary sources for grammaticalization studies, the editors rely on sketches of grammaticalization phenomena from experts in individual languages guided by a typological questionnaire.

Understanding convergent evasion mechanisms in cancer and chronic infection: Implications for immunotherapy Matthias Theobald, Hansjörg Schild, 2024-06-04 The complex interactions between the innate and adaptive immune systems function to recognize and clear pathogens or transformed cells, but inefficient interactions between these two systems can result in harmful immunologic responses including chronic infections and the development of cancer. Several hallmarks of dysfunctional adaptive immune responses often detected in tumors share specific features with ineffective immunity in chronic infections. The members of the micromilieu actively participate in the process of tumorigenesis or chronification of infection by modulating innate and adaptive immune system interactions leading e.g. to insufficient T cell responses. The best example is given by the acquisition of an “exhausted” state of cytotoxic CD8+ T cells (CTLs) responding to chronic infections or tumors that are associated with elevated expression of inhibitory receptors and impaired cytokine response. Targeting these major inhibitory pathways by immune checkpoint blockers represents a prime example of successful clinical translation of tumor-specific immunotherapies. Understanding the mechanisms behind (mal)adaptations of the immune system is crucial for achieving therapeutic benefits. The establishment and co-evolution of a dynamic microenvironment niche constituted by the recruitment of numerous cell types dampen immune responses and thus contribute to the development of neoplastic transformation as well as infection. Although there are examples of successful immunotherapeutic approaches (CAR-T cells, immune checkpoint inhibitors, or mRNA vaccination), a large percentage of patients with cancer or chronic infections still do not benefit from these therapies or develop severe immune-related adverse events. The reasons for these failures are not well understood. A possible explanation might be that current immunotherapies target predominantly the effector arm of the immune system by trying to reactivate dysfunctional T cells, but do not sufficiently address the influence of the innate immune system and the contributions of the tumor microenvironment (TME)

niche. The main problem we would like to address in this special issue is how inappropriate function of the innate immune system affects adaptive immunity and contributes to inefficient anti-cancer immunity and chronification of infections. The central goal is to provide a more precise understanding of the various (common and novel) immune evasion mechanisms in cancers and in chronic infections to obtain a detailed map of common and disease-specific immune escape checkpoints. To that aim, we want to compile a wide array of interdisciplinary studies exploring a comparative and multi-layered analysis of mechanisms responsible for inefficient immune responses, including novel approaches i.e. multi-omics or epigenetic signaling. We would also like to combine studies from different fields, including basic and clinical immunology, oncology, and virology/microbiology. We welcome the submission of Original Research, Review, Mini-Review, Methods, Case report, and Perspective articles that cover, but are not limited to the following topics: • Convergent mechanisms supporting immune escape in preclinical models (tumors and chronic infections) • Convergent evasion mechanisms mediated by tumor-infiltrating suppressive cells (Treg, MDSC, macro-phages, soluble mediators, signaling, metabolism, ...) • Convergent immune evasion mechanisms mediated by chronic infection (viral or parasite) • Novel strategies to modulate the TME by direct or indirect targeting of immune suppressor cells. • Approaches to enhance persistence and resilience of anticancer T cells • Combinatorial therapeutic strategies (mRNA, antibodies, immune checkpoint blockers ...) that target convergent immune evasion mechanisms Manuscripts consisting solely of bioinformatics or computational analysis of public genomic or transcriptomic databases which are not accompanied by robust and relevant validation (clinical cohort or biological validation in vitro or in vivo) are out of scope for this topic.

Translational Methods for Parkinson's Disease and Atypical Parkinsonism Research Sergiu Groppa, Susanne A. Schneider, 2024-09-18 This volume provides readers with an overview of translational paths that can be used to study the pathophysiology of Parkinson's Disease and atypical parkinsonism, including molecular processes, tissue integrity, and cerebral networks during inflammatory and neurodegenerative processes. The chapters in this book are organized into three parts and cover topics such as new developments of cerebral circuit characterizations and computational neuroscience for the description of the brain's transition through disease stages; static and dynamic systemic changes with clinical and functional outcome measures; and atypical syndromes such as neurodegenerations, immunological processes, and progressive disease states. In the Neuromethods series style, chapters include the kind of detail and key advice from the specialists needed to get successful results in your laboratory. Cutting-edge and comprehensive, Translational Methods for Parkinson's Disease and Atypical Parkinsonism Research is a valuable resource that provides a new perspective on the disease from a scientific and clinical point of view, and highlights the importance of available and emerging technologies.

Students', Graduates' and Young Professionals' Critical Use of Online Information Olga Zlatkin-Troitschanskaia, Marie-Theres Nagel, Verena Klose, Alexander Mehler, 2024-11-20 This book addresses the topic of online information for everyday personal and professional use by students, graduates, and young professionals. It focuses on the development of the job-related use of online information by young professionals in their practical phases of education (traineeship/practical year) in the domains of law, teaching, and medicine. The research conducted in this context investigates the general and domain-specific use of online resources in educational contexts and examines the effectiveness of an innovative digital training approach in enhancing skills required for the competent use of online information. For this purpose, the presented research uses a yet unprecedented approach of data triangulation, in which self-rated data, digitally and in vivo assessed response process data and expert ratings are integrated into a theoretically founded assessment framework and are examined from various interdisciplinary perspectives with different analysis methods. Overall, this work addresses key research questions related to the use of online information in practical tasks as well as to the impact of digital training. It provides in-depth multidisciplinary analyses of multimodal processes and performance data, allowing implications equally relevant for practitioners, policymakers, and researchers in the field of education.

Positive Learning in the Age of Information Olga Zlatkin-Troitschanskaia, Gabriel Wittum, Andreas Dengel, 2017-12-15 While information and communication technology has a vast influence on our lives, little is understood about its effects on the way we learn. In the Age of Information, students – consciously or not – are learning in diverse formal and informal environments from a broad variety of sources, with scientific knowledge competing against unfounded assertions, and misinformation and biased data spreading through social and mass media. The Positive Learning in the Age of Information (PLATO) program illustrated by the contributions in this book unites outstanding and highly innovative expertise on the fundamentals of information processing and human learning to investigate a new paradigm of positive learning as a vital, morally and ethically oriented approach, which is of existential importance to maintaining the civilization standards of a modern society in the digital age.

"It's One Less Plate That They're Spinning". Graphic Novels to Help Struggling Writers? Christina Voss (married Lyons), 2021-10-25 Seminar paper from the year 2010 in the subject English Language and Literature Studies - Literature, grade: A, Southern Illinois University Carbondale (Curriculum & Instruction), language: English, abstract: In the history of teaching, different kinds of visual literacies could be shown beneficial for students; it need not be a whole novel rendered in pictures, it can start with simple letter recognition. The present study will deal with a struggling writer's experiences with graphic novels. My single case study participant is a 6th-grade, male struggling writer of African descent, born in the U.S. He

is not professionally diagnosed, but has an IEP at his middle school for executive function disorder, which officially does not exist as a disease. His teachers have noticed that he has trouble executing written tasks, although he is perfectly able to dictate content of high quality. It seems to be not only a graphomotor dysfunction, for he can type a little better than handwrite; the main problem for him is to start a writing task, and also to finish it. As preliminary data from a year-long tutoring experience in a local Reading Clinic revealed, during which time I worked with him first in a classroom environment for half a year, and then in my office with just two tutees present, the boy reads at 9th grade level; however, when asked to do a quickwrite in 10 minutes, he can only come up with sentences like, Can I have a drink please?, whereas the other tutees managed to write half a page or a page of a story. His handwriting is huge, uneven, bears mechanical errors (although not enough to call him dyslexic for his age category), and so slow-paced that he cannot manage to finish a task in a given time. In clear opposition to this stands the observation that Remy has an astonishingly advanced vocabulary; when talking to him, one thinks he is much older and more mature, and very polite and well-behaved. This impression fades when one tutors him, and he exhibits unsuppressed, child-like behavior like farting and belching without embarrassment. The other participants are 28 teachers / professors who use graphic novels and took an online survey; 2 high school English teachers who do not use graphic novels and were interviewed personally; 20 authors and illustrators, as well as scholarly reviewers of graphic novels who took their respective online surveys.

Inorganic Electronic Structure and Spectroscopy, Applications and Case Studies Edward I. Solomon, A. B. P. Lever, 1999-06-23 Spectroscopy is an analytical method used to detect and identify samples, and analyze the electronic structure and behavior of a compound. Electronic structure is the bonding of inorganic compounds that give rise to a compounds' physical properties and reactivity. The two volume set covers current development in inorganic electronic spectroscopy. Because the field is inextricably linked to the more general area of electronic structure, the volumes will cover both inorganic spectroscopy and electronic structure. This second volume includes a series of case studies demonstrating how various methods and procedures in Volume 1 can be applied to important and topical areas of inorganic spectroscopy and electronic structure
