Sapiens [Tenth Anniversary Edition] Yuval Noah Harari, 2025-02-18 New York Times Readers' Pick: Top 100 Books of the 21st Century The tenth anniversary edition of the internationally bestselling phenomenon that cemented Yuval Noah Harari as one of the most prominent historians of our time—featuring a new afterword from the author. One hundred thousand years ago, at least six human species inhabited the earth. Today there is just one. Us. Homo sapiens. How did our species succeed in the battle for dominance? Why did our foraging ancestors come together to create cities and kingdoms? How did we come to believe in gods, nations, and human rights; to trust money, books, and laws; and to be enslaved by bureaucracy, timetables, and consumerism? And what will our world be like in the millennia to come? In *Sapiens*, Professor Yuval Noah Harari spans the whole of human history, from the very first humans to walk the earth to the radical—and sometimes devastating—breakthroughs of the Cognitive, Agricultural, and Scientific Revolutions. Drawing on insights from biology, anthropology, paleontology, and economics, and incorporating full-color illustrations throughout the text, he explores how the currents of history have shaped our human societies, the animals and plants around us, and even our personalities. Can we ever free our behavior from the legacy of our ancestors? And what, if anything, can we do to influence the course of the centuries to come? Bold, wide-ranging, and provocative, *Sapiens* integrates history and science to challenge everything we thought we knew about being human: our thoughts, our actions, our heritage...and our future.

Summary Noah Fran, 2017-09-09 Harari attempts to capsule humankind's, and more specifically, Homo Sapiens' existence over two million years of existence. He uses biology, anthropology, and sociology to link our ancestors from millennia past, and tells a gripping tale of how different species of humankind, at different times emerged, developed, and for some, died off and disappeared totally from the face of the earth. He explains how language, culture, and religion developed over hundreds of thousands of years even with the biological constants dictated by nature. He offers compelling arguments on what made humans superior to other animals, beyond just being able to walk upright, and deftly use opposable thumbs. Harari, in his sweeping tale of birth, survival, and death, categorically assumes the forces expounded in the evolutionary theories of Darwin, and puts question marks on those milestones of human development that evolution cannot explain. In a roughly, chronological order, he divides human progress into four distinct phases: Read more....

From Animals Into Gods Yuval Noah Harari, 2012-07-16 About 100,000 years ago, Homo sapiens was still an insignificant animal minding its own business in a corner of Africa. Our ancestors shared the planet with at least five other human species, and their role in the ecosystem was no greater than that of gorillas, fireflies, or jellyfish. Then, about 70,000 years ago, a mysterious change took place in the mind of Homo sapiens, transforming it into the master of the entire planet and the terror of the ecosystem. Today it stands on the verge of becoming a god, acquiring divine abilities of creation and destruction. * How did Homo sapiens conquer Earth? * What befell the other human species? * When did money, states and religion appear, and why? * How did science and capitalism become the dominant creeds of the modern era? * Does history have a direction? * Is there justice in history? * Did people become happier as history unfolded? * And what are the chances that Homo sapiens will still be around in a hundred years?

A Brief History of the Human Race Michael Cook,2003 Why has human history been crowded into the last few thousand years? Why has it happened at all? Could it have happened in a radically different way? What should we make of the disproportionate role of the West in shaping the world we currently live in? This witty, intelligent hopscotch through human history addresses these questions and more. Michael Cook sifts the human career on earth for the most telling nuggets and then uses them to elucidate the whole. From the calendars of Mesoamerica and the temple courtesans of medieval India to the intricacies of marriage among an aboriginal Australian tribe, Cook explains the sometimes eccentric variety in human cultural expression. He guides us from the prehistoric origins of human history across the globe through the increasing unification of the world, first by Muslims and then by European Christians in the modern period, illuminating the contingencies that have governed broad historical change.
