747 Joe Sutter, Jay Spenser, 2010-08-03 747 is the thrilling story behind the Queen of the Skies—the Boeing 747—as told by Joe Sutter, one of the most celebrated engineers of the twentieth century, who spearheaded its design and construction. Sutter's vivid narrative takes us back to a time when American technology was cutting-edge and jet travel was still glamorous and new. With wit and warmth, he gives an insider's sense of the larger than life-size personalities—and the tensions—in the aeronautical world.

747 : Creating the World's First Jumbo Jet and Other Adventures from a Life in Aviation , 2013 Seattle, 1960's. Joe Sutter, the engineer who spearheaded the design and construction of the Boeing 747, tells the story of the world's first jumbo jet.

*Powering the World's Airlines* Reiner Decher, 2020-02-28 The first efforts of man to fly were limited by his ability to generate sufficient power to lift a heavier-than-air machine off the ground. Propulsion and thrust have therefore been the most fundamental elements in the development of aircraft engines. From the simple propellers of the first airlines of the 1920s and 1930s, to the turboprops and turbojets of the modern era, the engines used in airlines have undergone dramatic development over a century of remarkable change. These advances are examined in detail by aeronautical engineer and author Reiner Decher, who provides a layman's guide to the engines that have, and continue to, power the aircraft which carry millions of travelers across millions of miles each year. Reiner Decher also looks at the development of aero engines during the Second World War and how that conflict drove innovation. He also explains the nature of wing design and how they provide lift and of the considerations of airflow over their surfaces, from the early days of the twentieth century to the present. To enable an easy understanding of this intriguing subject, *Powering the World's Airlines* is profusely illustrated, transporting readers back to the time of each major development and introducing them to the key individuals of the aero industry in each era. After reading this comprehensive yet engaging story of the machines that power the aircraft in which we fly, no journey will ever seem quite the same again.

**Commercial Aircraft Projects** Hans-Henrich Altfeld, 2016-09-19 When it comes to very highly complex, commercially funded product-development projects it is not sufficient to apply standard project management techniques to manage and keep them under control. Instead, they need a project management approach which is perfectly adapted to their complex nature. This, however, may generate additional cost and a dilemma arises because in commercially-driven product developments there is the natural tendency to limit the management-related costs. The development of a new commercial aircraft is no exception. In fact, it can be regarded as an extreme example of this kind of project. This is why it is especially useful to analyse the project management capabilities and practices needed to manage them. Cost reductions can still be achieved by concentrating on the essential elements of some project management disciplines, to maintain their principal strengths, and combining them in a pragmatic way on the basis of an integrated architecture. This book goes beyond descriptions of management disciplines found elsewhere in its treatment of the architecture integration necessary to interlink product, process and resources data. Only with this connectedness can the interoperation of the management essentials yield maximum efficiency and effectiveness. *Commercial Aircraft Projects: Managing the Development of Highly Complex Products* proposes an integrated architecture and details, step-by-step, how it can be used for the management of commercial aircraft development projects. The findings can also be applied to other industrial sectors that produce complex hardware based on design inputs.

**Flying Blind** Peter Robison, 2022-10-11 NEW YORK TIMES BESTSELLER • A suspenseful behind-the-scenes look at the dysfunction that contributed to one of the worst tragedies in modern aviation: the 2018 and 2019 crashes of the Boeing 737 MAX. An authoritative, gripping and finely detailed narrative that charts the decline of one of the great American companies (New York Times Book Review), from the award-winning reporter for Bloomberg. Boeing is a century-old titan of industry. It played a major role in the early days of commercial flight, World War II bombing missions, and moon landings. The planemaker remains a cornerstone of the U.S. economy, as well as a linchpin in the awesome routine of modern air travel. But in 2018 and 2019, two crashes of the Boeing 737 MAX 8 killed 346 people. The crashes exposed a shocking pattern of malfeasance, leading to the biggest crisis in the company’s history—and one of the costliest corporate scandals ever. How did things go so horribly wrong at Boeing? *Flying Blind* is the definitive exposé of the disasters that transfixed the world.

Drawing from exclusive interviews with current and former employees of Boeing and the FAA; industry executives and analysts; and family members of the victims, it reveals how a broken corporate culture paved the way for catastrophe. It shows how in the race to beat the competition and reward top executives, Boeing skimmed on testing, pressured employees to meet unrealistic deadlines, and convinced regulators to put planes into service without properly equipping them or their pilots for flight. It examines how the company, once a treasured American innovator, became obsessed with the bottom line, putting shareholders over customers, employees, and communities. By Bloomberg investigative journalist Peter Robison, who covered Boeing as a beat reporter during the company's fateful merger with McDonnell Douglas in the late '90s, this is the story of a business gone wildly off course. At once riveting and disturbing, it shows how an iconic company fell prey to a win-at-all-costs mentality, threatening an industry and endangering countless lives.

The Magic of a Name: The Rolls-Royce Story, Part 2 Peter Pugh, 2015-04-02 The Magic of a Name tells the story of the first 40 years of Britain's most prestigious manufacturer - Rolls-Royce. Beginning with the historic meeting in 1904 of Henry Royce and the Honourable C.S. Rolls, and the birth in 1906 of the legendary Silver Ghost, Peter Pugh tells a story of genius, skill, hard work and dedication which gave the world cars and aero engines unrivalled in their excellence. In 1915, 100 years ago, the pair produced their first aero engine, the Eagle which along with the Hawk, Falcon and Condor proved themselves in battle in the First World War. In the Second the totemic Merlin was installed in the Spitfire and built in a race against time in 1940 to help win the Battle of Britain. With unrivalled access to the company's archives, Peter Pugh's history is a unique portrait of both an iconic name and of British industry at its best.

**Red Tail Skies** Jim Eames, 2021-11-30 Heroic, hilarious and sometimes just plain weird . . . Jim Eames shares great Qantas stories from World War II to the age of the jumbo and beyond. 'These are stories of passion and dedication, of risk and resilience, of excellence and Australian larrikinism, of inventiveness and determination.' Captain Richard Champion de Crespigny on The Flying Kangaroo 'Jim Eames captures the experiences of a small band of brave, professional and pioneering aircrew who confronted the dangers of war.' Air Chief Marshal Sir Angus Houston AK, AFC (Ret'd) on Courage in the Skies First published as the best-selling *Courage in the Skies* and *The Flying Kangaroo* From the challenges of its earliest days to the significant but little known involvement in Australia's World War II campaigns and its surge into the jet age and beyond, these are the stories of the men and women, the risk takers and the characters who shaped Qantas. Generous and richly told, *Red Tail Skies* is a warm-hearted reminder of why Qantas remains so important in the Australian psyche. It is the story of how a uniquely Australian style shaped the safest airline in the world. 'Jim Eames is a legend in the industry' The Australian

Close to the Sun Stephen Aris, 2002 How Europe Won Back Its Place In The Skies; The history of Airbus Industrie, the builders of the Airbus family of airliners, is an extraordinary saga involving diplomatic dramas, billion-dollar gambles in high

technology and a life-and-death struggle between the European planemakers and the giants of the American aerospace industry. Airbus began in 1967 with a Franco-German-British agreement to build a twin-engined, wide-bodied airliner, the plane that eventually became the Airbus A300. For the Germans, and especially for the French, the venture was a calculated response to Le Defi Americain, the threat of American economic domination, and it was largely their faith and determination which kept the venture going through its first eight years, when just 38 planes were sold, mainly to Air France. The British attitude, on the other hand, was distinctly equivocal, and the ink was barely dry on the agreement before Harold Wilson's government decided to back out and Rolls Royce took the fatal decision to back Lockheed's Tristar in preference to the Airbus. Happily for the British industry, however, Hawker Siddeley, with financial support from the Germans, kept a foot in the door and Brit

**Wings of Change** Ron Dick,Dan Patterson,2005 The gripping story of a rapid-fire period of change in aviation. The fourth volume in the Aviation Century series is the dramatic story of the worldshrinking developments in commercial aviation through the end of the twentieth century, in which airliners grew from frail biplanes to huge Jumbo jets. In the process, advanced air travel brought with it worldwide political, economic and social change. In 2004 commercial airlines carried an estimated 1.6 billion passengers. Each new generation of transport aircraft has brought greater reliability, economy and safety, and increased global commerce through technological advances. Each day millions of shipments now travel by air between continents via sophisticated air cargo and air express systems. Other chapters in Winds of Change examine: the wider world of aeronautics private aircraft (personal planes as well as ultralights, sailplanes, hang gliders and parasails) lighter-than-air flight (Zeppelins, blimps, hot-air balloons) rotary wings (helicopters and related craft) the challenges of research and development (from sketch pad to computers; designers, builders and test pilots).
