Operations and logistics are cornerstones of modern supply chains that in turn are essential for global business and economics. The composition, character and importance of supply chains and networks are rapidly changing, due to technological innovations such as Information and Communication Technologies, Sensors and Robotics, Internet of Things, and Additive Manufacturing, to name a few (often referred to as Industry 4.0). Societal developments such as environmental consciousness, urbanization or the optimal use of scarce resources are also impacting how supply chain networks are configured and operated. To face these challenges, an understanding of the basic as well as more advanced concepts and recent innovations is essential in building competitive and sustainable supply chains and, as part of that, logistics and operations. These span multiple disciplines and geographies, making them interdisciplinary and international. Therefore, this book contains contributions and views from a variety of experts from multiple countries, and combines management, engineering as well as basic information technology and social concepts. In particular, it aims to: provide a comprehensive guide for all relevant and major logistics, operations, and supply chain management topics in teaching and business practice address three levels of expertise, i.e., concepts and principles at a basic (undergraduate, BS) level, more advanced topics at a graduate level (MS), and finally recent (state-of-the-art) developments at a research level. The seminar is part of a project funded for 4 - 5 years to discuss the future of marketing. Three basic issues are addressed: How should we look at the market and its different forms, given the existence of dynamics? How should we look upon the exchange between market players given the existence of relationships and other close cooperative efforts? What kind of scientific approaches can we use when studying markets and market players? Following a comprehensive discussion of these issues, the book concludes by reexamining existing theories in light of these new ideas, challenging existing ways of thinking and looking towards a new future for marketing.

Strategic Sourcing and Category Management Magnus Carlsson, 2019-05-03 How is it possible to sell a kitchen at 30 per cent below market price? Why are hot dogs cheaper in IKEA than in the supermarket? How can IKEA sell the Lack table at half the price it was when it was launched 35 years ago and how can it be achieved with a substantial profit? Strategic Sourcing and Category Management examines how IKEA - and other cost leading companies - use category management to create advantages with direct and indirect sourcing. With 25 years' experience from IKEA, where he had the responsibility to develop and execute the company's purchasing strategy, author Magnus Carlsson shares his insights on important topics: when category management is profitable and why; how teams repeatedly create value and results; what the main approaches are in different categories; how a company implements category management; the difference between success and failure. In this new edition of Strategic Sourcing and Category Management, Magnus Carlsson has added new themes including examples and references from companies such as Maersk, Carlsberg, P&G and Aldi, illustrating the application of cost leadership that spans far beyond IKEA. Even there, the cost leadership lessons are not limited to home furnishings as the company is sourcing categories such as food, components, materials, transports and indirect materials, with a total purchasing spend of approximately €7 billion. But maybe even more importantly, the book illustrates how teams create value by thinking differently and asking the right questions, allowing an understanding that goes beyond mere tools and processes.
