Celestial Shadows John Westfall, William Sheehan, 2014-11-19 Much of what is known about the universe came from the study of celestial shadows. This book looks in detail at the way eclipses and other celestial shadows have given us amazing insights into the nature of the objects in our solar system and how they are even helping us discover and analyze planets that orbit stars other than our Sun. A variety of eclipses, transits, and occultations of the moons of Jupiter and Saturn, Pluto and its satellite Charon, asteroids and stars have helped astronomers to work out their dimensions, structures, and shapes - even the existence of atmospheres and structures of exoplanets. Long before Columbus set out to reach the Far East by sailing West, the curved shadow of the Earth on the Moon during a lunar eclipse revealed that we inhabit a round world, a globe. More recently, comparisons of the sunlit and Earthlit parts of the Moon have been used to determine changes in the Earth's brightness as a way of monitoring possible effects in cloud coverage which may be related to global warming. Shadows were used by the Greek mathematician Eratosthenes to work out the first estimate of the circumference of the Earth, by Galileo to measure the heights of the lunar mountains and by eighteenth century astronomers to determine the scale of the Solar System itself. Some of the rarest and most wonderful shadows of all are those cast onto Earth by the lovely Evening Star Venus as it goes between the Earth and the Sun. These majestic transits of Venus occur at most two in a century; after the 2012 transit, there is not a chance to observe this phenomenon until 2117, while the more common sweep of a total solar eclipse creates one of the most dramatic and awe-inspiring events of nature. Though it may have once been a source of consternation or dread, solar eclipses now lead thousands of amateur astronomers and eclipse-chasers to travel the globe in order to experience the dramatic view under totality. These phenomena are among the most spectacular available to observers and are given their full due in Westfall and Sheehan's comprehensive study.

Globalization and Health Ronald Labonté,Ted Schrecker,Corinne Packer,Vivien Runnels,2009-05-07 Contemporary globalization has had tremendous impact on health equity across the globe. However, no volume has systematically analyzed the relationship between globalization and global trends in health outcomes. This book consolidates and updates the findings of a global research project undertaken by the Globalisation Knowledge Network (GKN) of the World Health Organization's Commission on Social Determinants of Health. Chapters examine such questions as: How has trade liberalisation affected the social determinants of health? How has globalization affected food security, nutrition and equitable access to water and sanitation? How well do present global governance structures take account of the health equity effects associated with the social determinants of health? This landmark volume will be a necessary addition for researchers and scholars studying the field of globalization, health and social policy, and public health across the social sciences.

Second International Handbook of Urban Education William T. Pink,George W. Noblit,2017-01-06 This second handbook offers all new content in which readers will find a thoughtful and measured interrogation of significant contemporary thinking and practice in urban education. Each chapter reflects contemporary cutting-edge issues in urban education as defined by their local context. One important theme that runs throughout this handbook is how urban is defined, and under what conditions the marginalized are served by the schools they attend. Schooling continues to hold a special place both as a means to achieve social mobility and as a mechanism for supporting the economy of nations. This second handbook focuses on factors such as social stratification, segmentation, segregation, racialization, urbanization, class formation and maintenance, and patriarchy. The central concern is to explore how equity plays out for those traditionally marginalized in urban schools in different locations around the globe. Researchers will find an analysis framework that will make the current practice and outcomes of urban education, and their alternatives, more transparent, and in turn this will lead to solutions that can help improve the life-options for students historically underserved by urban schools.

Towards Convergence in Europe Daniel Vaughan-Whitehead,2019 This book aims to answer a number of important questions. To what extent have European countries converged or diverged with EU-wide economic and social indicators over the past 20 years? What have been the drivers of convergence? Why do some countries lag behind, while others experience continuous upward convergence? Why are these trajectories not always linear? Particular attention is paid to the role of institutions, actors and industrial relations – focusing on the resources and strategies of governments, employers and trade unions – in nudging EU countries onto an upward convergence path.
