White Matter Dementia Christopher M. Filley, 2016-04-28 Presenting the novel concept of white matter dementia, this unique book offers hope for a better understanding and treatment of dementia.

Cortical white matter: Beyond the pale Javier DeFelipe,

Journal of Nervous and Mental Disease, 1920 July 1918-1943 include reports of various neurological and psychiatric societies.

Sajous's Analytical Cyclopaedia of Practical Medicine Charles Eucharist de Medicis Sajous, 1905

The Dementias John Herbert Growdon, Martin Rossor, 1998 Dementia, technically defined as cognitive impairments sufficiently pervasive and severe enough that they disrupt independent life, is one of the most devastating symptoms of neurologic disease. While Alzheimer's disease (AD) is the most common neurodegenerative disease that causes it, more than 50 medical, psychiatric, and neurological conditions are associated with dementia. Well organized and expertly planned, this text provides new concepts of patient management that have come about through recent neuroscience research. This volume, reviewing the dementias with the needs of the clinician in mind, is unique in that the section dealing with disease mechanisms reviews the exciting recent scientific advance in regard to Alzheimer disease, whereas the clinical section (section A) focuses not on Alzheimer disease but upon related disorders, the less common dementing syndromes due to other neurodegenerative disorders. The editors of this Blue Book have brought together an extraordinary group of experts to define the scientific advances primarily in Alzheimer's disease (section B) and new treatments (section C) being developed.

* Written for non-expert general neurologists and residents * Provides new concepts of patient management discovered in neuroscience research * Includes unique coverage of recent scientific advances in Alzheimer's Disease

Neurobehavioral Aspects of Cerebrovascular Disease Robert A. Bornstein, Gregory G. Brown, 1991 This book provides a comprehensive discussion of neurobehavioral issues in stroke. In addition to presenting neurological and neuropsychological studies of cerebrovascular disease, it offers tutorials on the methods of imaging brain structure and measuring metabolism and blood flow. After reviewing the basic biochemical and pathophysiologic aspects of stroke, the authors discuss positron emission tomography, xenon cerebral blood flow, computed tomography of the head, and magnetic resonance imagery. The largest section of the book deals with the clinical and research issues facing professionals concerned with stroke. In particular, localization of function after stroke-induced deficits, stroke-related depression, cerebrovascular dementia, stroke risk factors, and disorders of cerebral vessels are considered. The book ends with discussions of recovery from stroke and of the management of neurobehavioral symptoms.
