The History of Large Federal Dams U.s. Department of the Interior Bureau of Reclamation,National Park Service,David P. Billington,2013-11 The history of federal involvement in dam construction goes back at least to the 1820s, when the U.S. Army Corps of Engineers built wing dams to improve navigation on the Ohio River. The work expanded after the Civil War, when Congress authorized the Corps to build storage dams on the upper Mississippi River and regulatory dams to aid navigation on the Ohio River. In 1902, when Congress established the Bureau of Reclamation (then called the “Reclamation Service”), the role of the federal government increased dramatically. Subsequently, large Bureau of Reclamation dams dotted the Western landscape. Together, Reclamation and the Corps have built the vast majority of major federal dams in the United States. These dams serve a wide variety of purposes. Historically, Bureau of Reclamation dams primarily served water storage and delivery requirements, while U.S. Army Corps of Engineers dams supported navigation and flood control. For both agencies, hydropower production had become an important secondary function. This history explores the story of federal contributions to dam planning, design, and construction by carefully selecting those dams and river systems that seem particularly critical to the story. Written by three distinguished historians, the history will interest engineers, historians, cultural resource planners, water resource planners and others interested in the challenges facing dam builders. At the same time, the history also addresses some of the negative environmental consequences of dam-building, a series of problems that today both Reclamation and the U.S. Army Corps of Engineers seek to resolve.

Dam Engineering Hasan Tosun,2019-02-20 Dams and their auxiliary structures are built to provide water for human consumption, irrigating lands, generating hydroelectric power, and use in industrial processes. They are critical structures for continuing life and providing public safety. Construction of a dam is a complicated task that requires sophisticated modern technology and technical expertise. Scientists need to review and adjust their perspectives on designing embankments and their related structures, and compaction and consolidation of fill material, behavior of concrete materials, geotechnical and seismological studies of the dam site, total risk analysis, safety monitoring and instrumentation, heightening, hydrological studies, soil conservation, and watershed management. This book intends to provide the reader with a comprehensive overview of the latest information in dam engineering.

Raising Arizona's Dams ,1995-02 This is the engrossing story of the unsung heroes who did the day-to-day work of building Arizona's dams, focusing on the lives of laborers and their families who created temporary construction communities during the building of seven major dams in central Arizona. The book focuses primarily on the 1903-1911 Roosevelt Dam camps and the 1926-1927 Camp Pleasant at Waddell Dam, although other camps dating from the 1890s through the 1940s are discussed as well. The book is liberally illustrated with historic photographs of the camps and the people who occupied them while building the dams.

The Hoover Dam Charles River Charles River Editors,2014-12-12 *Includes pictures *Includes accounts of the project written by workers and their family members *Includes a bibliography for further reading *Includes a table of contents This morning I came, I saw, and I was conquered, as everyone would be who sees for the first time this great feat of mankind...Ten years ago the place where we gathered was an unpeopled, forbidding desert. In the bottom of the gloomy canyon whose precipitous walls rose to height of more than a thousand feet, flowed a turbulent, dangerous river...The site of Boulder City was a cactus-covered waste. And the transformation wrought here in these years is a twentieth century marvel. - President Franklin D. Roosevelt, September 30, 1935 During the 1930s, at the height of the Great Depression, thousands of workers began work on the Hoover Dam, built in the Black Canyon, which had been cut by the powerful Colorado River. The Colorado River was responsible for the Grand Canyon, and by the 20th century, the idea of damming the river and creating an artificial lake was being explored for all of its potential, including hydroelectric power and irrigation. By the time the project was proposed in the 1920s, the contractors vowing to build it were facing the challenge of building the largest dam the world had ever known. As if that wasn't enough, the landscape was completely unforgiving, as described by the famous explorer John Wesley Powell generations earlier: The landscape everywhere, away from the river, is of rock--cliffs of rock, tables of rock, plateaus of rock, terraces of rock, crags of rock--ten thousand strangely carved forms...cathedral shaped buttes, towering hundreds or thousands of feet, cliffs that cannot be scaled, and canyon walls that shrink the river into insignificance, with vast hollow domes and tall pinnacles and shafts set on the verge overhead; and all highly colored. The engineering that went into the Hoover Dam was not just dangerous but unprecedented, to the extent that the Hoover Dam relied on building methods that had never been proven effective on such a giant scale. The project also had to employ tens of thousands of people in often dangerous working conditions, which resulted in scores of deaths. At the same time, however, the large number of men that traveled to work on the project helped turn Las Vegas, a nearby small desert town in Nevada, into Sin City. Despite all the difficulties, the Hoover Dam was completed on time, and President Roosevelt summed up just how impressive the accomplishment was in his speech dedicating the site in 1935: We are here to celebrate the completion of the greatest dam in the world, rising 726 feet above the bedrock of the river and altering the geography of a whole region:

we are here to see the creation of the largest artificial lake in the world-115 miles long, holding enough water, for example, to cover the whole State of Connecticut to a depth of ten feet; and we are here to see nearing completion a power house which will contain the largest generators and turbines yet installed in this country, machinery that can continuously supply nearly two million horsepower of electric energy. The Hoover Dam: The History and Construction of America's Most Famous Engineering Project chronicles the construction of America's most famous dam. Along with pictures of important people, places, and events, you will learn about the Hoover Dam like never before, in no time at all.
