Nutrition in Neurologic Disorders Ethem Murat Arsava, 2017-05-04 This book offers focused and concise coverage of all

issues relating to malnutrition in the field of neurology, and in particular addresses practical aspects of nutritional support from a neurology perspective. In addition to providing basic knowledge on important nutritional concepts (body metabolism, assessment and diagnosis of malnutrition, epidemiology, enteral/parenteral nutrition), detailed information is presented on nutritional support for various neurologic disorders handled in a variety of settings, including the neurointensive care unit. Much consideration is also given to the diagnosis and management of dysphagia, which is a common and highly critical cause of malnutrition in these patients. Finally, the newly developing concept of neuronutrition (or brain foods) – the use of certain nutrients for treatment of neurologic disorders – is discussed. By providing practical solutions to commonly encountered challenges in the nutritional management of neurologic patients, this book will prove a valuable resource for practicing neurologists in a wide variety of fields. It will also be very useful for medical personnel from other specialties such as clinical nutrition, critical care, and geriatric medicine.

*Swallowing – Physiology, Disorders, Diagnosis and Therapy* Gauri Mankekar, 2015-05-23 Swallowing difficulty or dysphagia is a common disorder and affects all age groups from the newborn to the elderly. Several medical conditions like lack of dentition, gastroesophageal reflux disease, eosinophilic esophagitis, cardiomegaly and strokes can cause dysphagia. It can also follow head -neck surgeries. It is important to diagnose and treat dysphagia, otherwise it can lead to malnutrition and dehydration. Improved understanding of the physiology of swallowing, advances in endoscopic and radiological techniques along with an increasing elderly population has resulted in development of a separate swallowing disorders discipline. This book would be an aid for clinicians, educators and trainees from the fields of speech language pathology, pediatrics, otolaryngology, gastroenterology, oncology, neurology, geriatrics and rehabilitation, all of who form a part of the multidisciplinary swallowing team.

*Introduction to Adult Swallowing Disorders* Michael A. Crary, Michael E. Groher, 2003 This practical guide provides a hands-on approach to diagnosis and management of swallowing disorders, designed to help readers establish a basis for clinical decision-making regarding dysphagic patients. *The Relationship Between Spontaneous Swallowing Frequency and Clinical Measures of Swallowing in ALS.* Grace

Hirst,2023 This study is a preliminary investigation of spontaneous swallowing frequency (SSF) and its use as a remote swallowing evaluation tool in patients with Amyotrophic Lateral Sclerosis (ALS). Via a mobile application on patients' phones, weekly recordings of spontaneous swallowing at a home setting were sent in to be analyzed. Recordings were sent in for a total of six months. Spontaneous swallowing frequency is also compared to typical gold standard clinical evaluations used to monitor the swallowing abilities of patients. Gold standard assessments like the Modified Barium Swallow Study (MBSS) was completed at baseline and at the end of 6 months. Other clinical swallowing measures like the Eating Assessment Tool (EAT-10) and the Mann Assessment of Swallowing Ability (MASA) were given every twelve weeks. We hypothesized that spontaneous swallowing frequency will be closely associated with other measures of swallowing evaluation. A total of 5 participants were analyzed as a part of this work. Statistical analyses consisted of Spearman's correlation and independent t-tests. Spontaneous swallowing frequency was found to be lower in individuals experiencing weight loss which could be a potential link for SSF being an indicator of dysphagia severity. Over the course of six months, the study was successful in collecting data on swallowing changes in ALS individuals from a home setting.

*The Effect of the McNeill Dysphagia Therapy Program on Spontaneous Swallowing Frequency in Post-acute Patients with Post Stroke and Oropharyngeal Dysphagia* Sonal Pathak,2024 Objective: The objective of this investigation was to determine the effect of the McNeill Dysphagia Therapy Program (MDTP) on spontaneous swallowing frequency (SSF) in post-stroke nursing home patients with oropharyngeal dysphagia (OD). Oropharyngeal Dysphagia is a common post-stroke complication associated with heightened morbidity and mortality. Research has established a relationship between reduced rate of SSF and OD. Methods: Three adult patients with OD underwent 15 sessions of MDTP. Clinical diagnosis of OD was established pre-treatment through Video fluoroscopic Swallow Study (VFSS) and Mann Assessment of Swallowing Ability (MANN). Functional Oral Intake Scale (FIOS) was employed to assess oral intake status. Participants' SSF per minute was recorded via recordings over 15 minutes. These assessments were conducted pre-treatment, post-treatment visit 16, and after a 3-week follow-up period. Results: All 3 participants with OD exhibited reduced SSF prior to MDTP. Following treatment, there was a noteworthy increase in SSF and noted improvement in clinical swallowing proficiency, functional oral intake, weight augmentation, and patient perception of swallowing ability post-MDTP. Conclusion: The use of MDTP offered improved utility in identifying the severity of OD pre-treatment but also provided a cogent method for monitoring progress and outcome across the treatment period. The inclusion of noninvasive SSF monitoring may enhance efficacious interventions aimed at addressing OD.
