Tree Of Language Families

William Dwight Whitney

The Indo-European Language Family Thomas Olander,2022-09-22 Modern languages like English, Spanish, Russian and Hindi as well as ancient languages like Greek, Latin and Sanskrit all belong to the Indo-European language family, which means that they all descend from a common ancestor. But how, more precisely, are the Indo-European languages related to each other? This book brings together pioneering research from a team of international scholars to address this fundamental question. It provides an introduction to linguistic subgrouping as well as offering comprehensive, systematic and up-to-date analyses of the ten main branches of the Indo-European language family: Anatolian, Tocharian, Italic, Celtic, Germanic, Greek, Armenian, Albanian, Indo-Iranian and Balto-Slavic. By highlighting that these branches are saliently different from each other, yet at the same time display striking similarities, the book demonstrates the early diversification of the Indo-European language family, spoken today by half the world's population. This title is also available as open access on Cambridge Core.

Structural Theory of Automata, Semigroups, and Universal Algebra Valery B. Kudryavtsev,Ivo G. Rosenberg,2006-01-18 Several of the contributions to this volume bring forward many mutually beneficial interactions and connections between the three domains of the title. Developing them was the main purpose of the NATO ASI summerschool held in Montreal in 2003. Although some connections, for example between semigroups and automata, were known for a long time, developing them and surveying them in one volume is novel and hopefully stimulating for the future. Another aspect is the emphasis on the structural theory of automata that studies ways to contstruct big automata from small ones. The volume also has contributions on top current research or surveys in the three domains. One contribution even links clones of universal algebra with the computational complexity of computer science. Three contributions introduce the reader to research in the former East block.
