*Policing a Socialist Society* Nancy T. Wolfe, 1992-01-30 What was it like to live under the police and a criminal justice system in a socialist society and in a country governed by Marxist-Leninists? This is the first book-length study of criminal justice in the German Democratic Republic. Based on first-hand research conducted over a six-year period from 1985 to the present, the case study analyzes how the society has been transformed politically, socially, and economically since the 1989 revolution and reincorporation with the rest of Germany. This volume should be of interest to students, teachers, and professionals in criminal justice and sociology, political science, law, and European history. This analysis of policing in a socialist society reports on the work of the People's Police and the State Security Police and how principles of criminal justice and methods of governance changed with the dissolution of the GDR. The study relies on primary source materials and extensive interviews of police professionals and academicians in the field of criminal justice.

**Nonlinear Dynamics in Geosciences** Anastasios A. Tsonis, 2007-09-25 This work comprises the proceedings of a conference held last year in Rhodes, Greece, to assess developments during the last 20 years in the field of nonlinear dynamics in geosciences. The volume has its own authority as part of the Aegean Conferences cycle, but it also brings together the most up-to-date research from the atmospheric sciences, hydrology, geology, and other areas of geosciences, and discusses the advances made and the future directions of nonlinear dynamics.

**Farmer Power** Sudhir Kumar Suthar, 2025-11-20 In September-October 2020, around 300,000 Indian farmers marched to New Delhi, to protest against three new farm laws by stationing themselves on national highways around the capital for over a year. This movement, the largest farmer assertion in recent times, with its firm commitment to democracy, civil disobedience and peaceful resistance, carved out a distinct political space for itself. For over a decade prior, farmer groups had repeatedly tried to highlight agricultural issues neglected by successive governments. However, what transpired after 2020 was a unique moment in the history of world social movements. Farmer Power examines the 2020-21 movement and delves into its evolution, history and what made it unique on the global scale. This book also looks into broader agricultural sector issues, including the challenges faced by small and marginal farmers, agricultural labourers, and the limitations of the procurement system. It seeks to highlight the policy interventions made by Indian state in the past two decades on these

issues. This comprehensive account is essential for anyone interested in the politics of agriculture, livelihoods, and rural scenarios.

**Configurational Forces** Gerard A. Maugin,2016-04-19 Exploring recent developments in continuum mechanics, *Configurational Forces: Thermomechanics, Physics, Mathematics, and Numerics* presents the general framework for configurational forces. It also covers a range of applications in engineering and condensed matter physics. The author presents the fundamentals of accepted standard continuum mechanics, before introducing Eshelby material stress, field theory, variational formulations, Noether's theorem, and the resulting conservation laws. In the chapter on complex continua, he compares the classical perspective of B.D. Coleman and W. Noll with the viewpoint linked to abstract field theory. He then describes the important notion of local structural rearrangement and its relationship to Eshelby stress. After looking at the relevance of Eshelby stress in the thermodynamic description of singular interfaces, the text focuses on fracture problems, microstructured media, systems with mass exchanges, and electromagnetic deformable media. The concluding chapters discuss the exploitation of the canonical conservation law of momentum in nonlinear wave propagation, the application of canonical-momentum conservation law and material force in numerical schemes, and similarities of fluid mechanics and aerodynamics. Written by a long-time researcher in mechanical engineering, this book provides a detailed treatment of the theory of configurational forces—one of the latest and most fruitful advances in macroscopic field theories. Through many applications, it shows the depth and efficiency of this theory.

**Thermodynamics in the Quantum Regime** Felix Binder,Luis A. Correa,Christian Gogolin,Janet Anders,Gerardo Adesso,2019-04-01 Quantum Thermodynamics is a novel research field which explores the emergence of thermodynamics from quantum theory and addresses thermodynamic phenomena which appear in finite-size, non-equilibrium and finite-time

contexts. Blending together elements from open quantum systems, statistical mechanics, quantum many-body physics, and quantum information theory, it pinpoints thermodynamic advantages and barriers emerging from genuinely quantum properties such as quantum coherence and correlations. Owing to recent experimental efforts, the field is moving quickly towards practical applications, such as nano-scale heat devices, or thermodynamically optimised protocols for emergent quantum technologies. Starting from the basics, the present volume reviews some of the most recent developments, as well as some of the most important open problems in quantum thermodynamics. The self-contained chapters provide concise and topical introductions to researchers who are new to the field. Experts will find them useful as a reference for the current state-of-the-art. In six sections the book covers topics such as quantum heat engines and refrigerators, fluctuation theorems, the emergence of thermodynamic equilibrium, thermodynamics of strongly coupled systems, as well as various information theoretic approaches including Landauer's principle and thermal operations. It concludes with a section dedicated to recent quantum thermodynamics experiments and experimental prospects on a variety of platforms ranging from cold atoms to photonic systems, and NV centres.
