Advanced Artificial Intelligence and Robo-Justice Georgios I. Zekos, 2022-05-16 The book deals with digital technology which is transforming the landscape of dispute resolution. It illustrates the application of AI in the legal field and shows the future prospect of robo-justice for an AAI society in the advanced artificial intelligence era. In other words, the present justice system and the influence of current AI upon courts and arbitration are investigated. The transforming role of AI on all legal fields is examined thoroughly by giving answers concerning AI legal personality and liability. The analysis shows that digital technology is generating an ever-growing number of disputes and at the same time is challenging the effectiveness and reach of traditional dispute resolution avenues. To that extent, the book presents in tandem the impact of AI upon courts and arbitration, and reveals the role of AAI in generating a new robo-justice system. Finally, the end of the perplexing relation of courts and arbitration is evidenced methodically and comprehensively.

Algorithms in Advanced Artificial Intelligence R. N. V. Jagan Mohan, Vasamsetty Chandra Sekhar, V. M. N. S. S. V. K. R. Gupta, 2024-07-08 The most common form of severe dementia, Alzheimer's disease (AD), is a cumulative neurological disorder because of the degradation and death of nerve cells in the brain tissue, intelligence steadily declines and most of its activities are compromised in AD. Before diving into the level of AD diagnosis, it is essential to highlight the fundamental differences between conventional machine learning (ML) and deep learning (DL). This work covers a number of photo-preprocessing approaches that aid in learning because image processing is essential for the diagnosis of AD. The most crucial kind of neural network for computer vision used in medical image processing is called a Convolutional Neural Network (CNN). The proposed study will consider facial characteristics, including expressions and eye movements using the diffusion model, as part of CNN's meticulous approach to Alzheimer's diagnosis. Convolutional neural networks were used in an effort to sense Alzheimer's disease in its early stages using a big collection of pictures of facial expressions.

Considerations on the AI Endgame Soenke Ziesche, Roman V. Yampolskiy, 2025-03-20 This seminal volume offers an interdisciplinary exploration into the rapidly evolving field of artificial intelligence and its societal implications. The EU Artificial Intelligence (AI) Act Ceyhun Necati Pehlivan, Nikolaus Forgó, Peggy Valcke, 2024-12-03 The EU Artificial Intelligence (AI) Act: A Commentary Edited by Ceyhun Necati Pehlivan, Nikolaus Forgó & Peggy Valcke As artificial intelligence (AI) systems increasingly permeate various facets of our lives, there are growing concerns about their disruptive effects on society and the risks they pose to human rights, democracy, and the rule of law. Accordingly, the AI phenomenon has given rise to numerous governance frameworks at all levels of jurisdiction. In this context, it cannot be denied that the European Union's AI Act is the first legislation of its kind with global impact, establishing horizontal rules for the development, market placement, and use of AI systems. However, grasping its subtleties and intricacies poses a formidable challenge. This, then, is the first book to offer a reference guide and research tool, providing the full text of the AI Act as published in the Official Journal of 12 July 2024, along with an in-depth, article-by-article commentary. The commentary examines each article in sequential order, ensuring a thorough understanding of every provision. More than eighty prestigious scholars and top-tier professionals, all experts in the field, collectively contribute an exhaustive exploration and analysis of the AI Act, making this volume 'the' guide, likely shaping the Act's interpretation and application in courts, and establishing it as a preeminent resource for legal determinations and academic research. The authors include senior scholars, legal practitioners, judges, and regulators from top law schools, international law firms, and EU institutions. Their authoritative and respected opinions and diverse insights and perspectives will help to shape legal and regulatory

frameworks for AI, not only in Europe but worldwide. Lawyers, judges, and other legal professionals will benefit from the book's lucid interpretation of the AI Act, aiding in its application and compliance, thus enhancing their ability to effectively practice and uphold AI-related regulations. Professionals working in, interested in, and willing to learn more about the field of AI will find thorough guidance, making it an essential resource for anyone involved in AI development and systems design. In addition, policymakers and institutions across the globe will have the opportunity to learn from the EU's pioneering approach, helping them craft their own AI policies and legislation.

Architectures of Global AI Governance Matthijs M. Maas, 2025-09-30 The impacts of artificial intelligence (AI) are often framed as an uncontrollable wave of technological change. But AI's trajectory is not preordained—its governance is a human choice, one that hinges on global institutions that are effective, coherent, and resilient to AI's own disruptions. As AI systems grow more powerful, states and international institutions today face mounting pressure to address their impacts. How can they govern this changing technology, in a rapidly changing world, using tools that may themselves be altered by AI? *Architectures of Global AI Governance* provides the conceptual and practical tools to tackle this question. Drawing from technology law, global governance scholarship, and history, the book maps AI's growing global stakes, traces the trajectory of the global AI regime complex, and sets the scaffolding for new institutions. The book argues that, in crafting a global AI governance architecture, we must reckon with three facets of change: sociotechnical changes in AI systems' uses and impacts; AI-driven changes in the fabric of international law; and political changes in the global AI regime complex. Many AI governance approaches will be too static unless they adapt to these forces. In response, *Architectures of Global AI Governance* equips researchers and policymakers with insights and actionable recommendations for questions of regulatory approach, instrument choice, and regime design. More than just an inquiry into how to govern AI, this book explores the changing face of global cooperation in the intelligence era—and how we can safeguard human choice over a future of transformative technological change. This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is free to read on Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations.

Automated decision-making in the public sector. Artificial Intelligence vs Administrative Intelligence? Hortense Fricker,2021-01-12 Master's Thesis from the year 2020 in the subject Organisation and administration - Public administration, grade: 1,1, Free University of Berlin (Otto-Suhr-Institut), language: English, abstract: The paper is divided in two main parts. The first part introduces the agency theory and its application to two relevant aspects: the agency theory in the public sector and the agency theory involving artificial agents. The second part aims at providing answers to the research questions, by discussing the changes in the agency of the public administrations, as well as the changes in the control methods used to monitor these administrations. Finally, the conclusion summarizes the answer to the research questions, exposes the implications and limits of this paper and offers leads for possible future research on this topic. Automated decision-making (ADM), a type of algorithm which supports decision-making and combines advanced analytics and data mining to make predictions, has been developed in various public sector fields, from predictive policing to healthcare, and is increasingly helping public agents by delivering analysis that they can leverage to make their decisions. This technique involves three main stakeholders: the programmer of the algorithmic system; the user, who is the public agent operating the ADM system; and the individuals affected by the decisions made using ADM. This paper focuses on the consequences on the governance and responsibility of administrations increasingly relying on algorithms to make their decisions. Does the introduction of ADM in public administrations transform their agency? If so, why does this change occur and how does it impact the control methods required to supervise the actions of administrations? The chosen approach is the agency theory, which is suited to deal with delegation, specifically between actors from different contextual backgrounds. France has been chosen as the case-study for this topic, as it has put in place relevant laws and public institutions in order to deal with public ADM. The method chosen to investigate this issue is based on a literature review, as it is appropriate to approach a case-study. This includes scientific papers for the technical aspects, from computer sciences to social and political sciences, as well as reports from governments, international institutions and private companies. More general literature, such as articles and blog posts are used for information on the use of ADM in France and the public debate surrounding it. Finally, the methodology also includes semi-structured interviews led with experts working on the topic of ADM in the public sector.

The Ultimate Modern Guide to Artificial Intelligence Enamul Haque,2020-07-21 The era of artificial intelligence has arrived. You, who only felt far from artificial intelligence, and the growing dream trees, are now inseparable from artificial intelligence. What does AI have to do with me? Isn't it a distant future that has nothing to do with me, not a scientist, a technician, or a computer programmer? Well, Artificial intelligence is not a story of someone who has nothing to do with it, but the fact is, it is now everyone's story. AI is already deeply infiltrating everyone's life. The question is no longer whether

we use technology or not; it's about working together in a better way. Surrounding technologies like Siri, Alexa, or Cortana are seamlessly integrated into our interactions. We walk into the room, turn on the lights, play songs, change the room temperature, keep track of shopping lists, book a ride at the airport, or remind ourselves to take the proper medication on time. It is now necessary to look at artificial intelligence from a broader and larger perspective. You should not just hang on to complex deep learning algorithms and think only through science and technology but through the eyes of emotions and humanities. These days, elementary school students learn English and coding at school. Tomorrow's elementary school students will learn AI. Of course, not everyone needs to be an AI expert. But if you don't understand AI, you will be left out of the trend of changing times. AI comes before English and coding. This is because artificial intelligence is the language and tool of the future. This book opens your door to the most critical understanding needed of AI and other relevant disruptive technologies. Artificial intelligence will significantly change societal structures and the operations of companies. The next generation of employees needs to be trained as a workforce before entering the job market, and the existing workforce is regularly recharged and skilled. There is plenty on this for reskilling too. This is the most definitive compendium of AI, The Internet of Things, Machine Learning, Deep Learning, Data Science, Big Data, Cloud Computing, Neural networks, Robotics, the future of work and the future of intelligent industries.

E-education Applications Claude Ghaoui, 2004 E-Education Applications: Human Factors and Innovative Approaches enforces the need to take multi-disciplinary and/or inter-disciplinary approaches, when solutions for e-education (or online-, e-learning) are introduced. By focusing on the issues that have impact on the usability of e-learning, the book specifically fills-in a gap in this area, which is particularly invaluable to practitioners. The book is aimed at researchers and practitioners from academia, industry, and government, for an in-depth coverage of a broad range of issues, ideas and practical experiences on this subject. It aims to raise more awareness in this important subject, promote good practice, and share and evaluate experiences (advantages, disadvantages, problems faced and lessons learned).
