AIR CRASH INVESTIGATIONS, LOST OVER THE ATLANTIC The Crash of Air France Flight 447 THE FINAL REPORT George Cramoisi, editor, 2012-09-01 On 31 May 2009, the Airbus A330 flight AF 447 took off from Rio de Janeiro Galeo airport bound for Paris Charles de Gaulle. At around 2 h 02, the Captain left the cockpit for a short nap. At around 2 h 08, at flight level 350, the crew made a course change of 12 degrees to the left, to avoid bad weather. At 2h 10min 05, likely following the obstruction of the Pitot probes by ice crystals, the speed indications were incorrect and some automatic systems disconnected. The aeroplane's flight path was not controlled by the two copilots. They were rejoined 1 minute 30 later by the Captain, while the aeroplane was in a stall situation that lasted until the impact with the sea at 2 h 14 min 28 s, killing all 228 persons on board. It took almost two years to recover the wreck of the aircraft from a depth of 4.000 metres. The accident resulted from a succession of events, such as inconsistency between the measured airspeeds, inappropriate control inputs, and the crew's failure to diagnose the stall situation

Air Crash Investigations: Lost Over the Atlantic, the Mysterious Disappearance of Air France Flight 447 George Cramoisi, 2010-05-24 On 31 May 2009, flight AF447, an Airbus A330-200, took off from Rio de Janeiro bound for Paris. At 2 h 10, a position message and some maintenance messages were transmitted by the ACARS automatic system. After this nothing was heard of from the aircraft. Six days later bodies and airplane parts were found by the French and Brazilian navies. All 228 passengers and crew members on board are presumed to have perished in the accident. A massive search by

air and sea craft for the plane's black boxes failed so far.

Understanding Air France 447 Bill Palmer, 2013-07-25 The most comprehensive coverage to date of Air France 447, an Airbus A330 that crashed in the ocean north of Brazil on June 1, 2009, killing all 228 persons on board. Written by A330 Captain, Bill Palmer, this book opens to understanding the actions of the crew, how they failed to understand and control the problem, and how the airplane works and the part it played. All in easy to understand terms. Addressed are the many contributing aspects of weather, human factors, and airplane system operation and design that the crew could not recover from. How each contributed is covered in detail along with what has been done, and needs to be done in the future to prevent this from happening again. AIR CRASH INVESTIGATIONS - KILLING 290 CIVILIANS - THE DOWNING OF IRAN AIR FLIGHT 655 BY THE USS VINCENNES Dirk Barreveld, 2018-10-07 On July 3, 1988, the American navy ship USS Vincennes, a Ticonderoga-class guided missile cruiser operating in the Persian Gulf, shot down Iran Air Flight 655, an Airbus A300B2-203, on its way from Tehran to Dubai. All 290 people on board died. Iran Air 655 flew within its assigned corridor. The USS Vincennes thought it had to deal with an Iranian F-14 fighter jet. From this point of view it was simply a case of mistaken identity. It is amazing that a guided missile cruiser with extremely advanced electronic capabilities such as the USS Vincennes, equipped with an ultra modern system such as Aegis, could make such a case of mistaken identity. Although the U.S. had to pay damages, a clear admission of guilt, the officers and commander of the Vincennes received awards and decorations after all.

Root Cause Analysis of Air France Flight 447 Accident (1 June 2009). ,2017 Air accidents are extremely rare events and aviation is the safest mode of transportation. On the other hand, risk is always present whenever any flights take place (Janic, 2000). Therefore, even identifying the main causes of one accidents could be very critical for preventing future crashes that could be occur at any point and any time. Therefore, the aim of this study is to investigate the root causes of the one of the deadliest accidents in the history of Air France that 228 occupants including the crew and the passengers lost their livesu20132013 Accident of Air France Flight 447 in 2009. The root causes investigation started with detecting problem and the information gathered through official reports and media was examined via timeline and information mapping tools. After this step, the possible causes were investigated in terms of environmental, vehicle and human-related factors. The problems were detected as pitot tube blockage, improper actions of pilots in emergency situation and task sharing problems of the crew. In order to find root causes behind these problems, 2 type of root cause analysis were used - 5 Why Technique and then Fish Bone Technique. The results showed that mainly human factors dominated the problems related to accident causations and there was human-related improper actions even behind the mechanical failures. Therefore, at the end of this analysis it could be said that the needs of the crew should be always evaluated in detail by the organizations. Moreover, training and instructions should be clear and adequate in order to support human-machine interaction especially during emergency

situations. Lastly, hierarchical relationships could have negative effects on the appropriate behaviors of the crew members in emergency situations.

The Digital Doctor: Hope, Hype, and Harm at the Dawn of Medicine's Computer Age Robert Wachter, 2015-04-10 The New York Times Science Bestseller from Robert Wachter, Modern Healthcare's #1 Most Influential Physician-Executive in the US While modern medicine produces miracles, it also delivers care that is too often unsafe, unreliable, unsatisfying, and impossibly expensive. For the past few decades, technology has been touted as the cure for all of healthcare's ills. But

medicine stubbornly resisted computerization – until now. Over the past five years, thanks largely to billions of dollars in federal incentives, healthcare has finally gone digital. Yet once clinicians started using computers to actually deliver care, it dawned on them that something was deeply wrong. Why were doctors no longer making eye contact with their patients? How could one of America’s leading hospitals give a teenager a 39-fold overdose of a common antibiotic, despite a state-of-the-art computerized prescribing system? How could a recruiting ad for physicians tout the absence of an electronic medical record as a major selling point? Logically enough, we’ve pinned the problems on clunky software, flawed implementations, absurd regulations, and bad karma. It was all of those things, but it was also something far more complicated. And far more interesting . . . Written with a rare combination of compelling stories and hard-hitting analysis by one of the nation’s most thoughtful physicians, *The Digital Doctor* examines healthcare at the dawn of its computer age. It tackles the hard questions, from how technology is changing care at the bedside to whether government intervention has been useful or destructive. And it does so with clarity, insight, humor, and compassion. Ultimately, it is a hopeful story. We need to recognize that computers in healthcare don’t simply replace my doctor’s scrawl with Helvetica 12, writes the author Dr. Robert Wachter. Instead, they transform the work, the people who do it, and their relationships with each other and with patients. . . . Sure, we should have thought of this sooner. But it’s not too late to get it right. This riveting book offers the prescription for getting it right, making it essential reading for everyone – patient and provider alike – who cares about our healthcare system.
