Handbook of Pipes and Piping Design, Application and Safety Mark Lewis,2012-09 A pipe is a tubular section or hollow cylinder, usually but not necessarily of circular cross-section, used mainly to convey substances which can flow - liquids and gases (fluids), slurries, powders, masses of small solids. It can also be used for structural applications; hollow pipe is far stiffer per unit weight than solid members. In common usage the words pipe and tube are usually interchangeable, but in industry and engineering, the terms are uniquely defined. The aim of this book is to present a core of this subject knowledge that is desirable for students.
