Ingeniería de Tránsito Rafael Cal y Mayor, James Cárdenas, 2018-04-10 La infraestructura del sistema vial es uno de los patrimonios más valiosos con que cuenta cualquier país, por lo que su magnitud y calidad representa uno de los indicadores del grado de desarrollo del mismo. En los últimos años, con el aumento cada vez mayor del parque vehicular, la circulación en las calles y carreteras se ha tornado más compleja, motivo por el cual, cobra gran importancia la realización de análisis de planeamiento, proyecto y de operación, más detallados de los sistemas viales, donde es precisamente la ingeniería de tránsito, aquella rama de la ingeniería, la llamada a tratar estos aspectos.

Aprovechamiento de los residuos de construcción y demolición en ingeniería y arquitectura Ana Sofía Figueroa Infante, Paula Andrea Cifuentes Ruiz, Elsa Beatriz Fonseca Santanilla, Sandra Liliana Uribe Celis, Lizeth del Carmen Molina, 2024-06-05 La obra presenta no solo el contexto teórico y normativo sino además las aplicaciones de los residuos de construcción y demolición (RCD) para su uso en espacios urbanos, vías y construcción. También incluye ejemplos y casos como el realizado con el apoyo de la Unidad Administrativa Especial de Rehabilitación y Mantenimiento Vial, en la construcción de una vía local en Bogotá, D. C. utilizando RCD en sus diferentes capas estructurales e instrumentada desde la subrasante hasta la capa de rodadura, para realizar un seguimiento del desempeño de estos materiales bajo cargas y efectos ambientales reales.

Multi-Criteria Decision-Making Techniques for Improvement Sustainability Engineering Processes Edmundas Kazimieras Zavadskas, Dragan Pamučar, Željko Stević, Abbas Mardani, 2020-12-15 The success of any activity and process depends fundamentally on the possibility of balancing (symmetry) needs and their satisfaction. That is, the ability to properly define a set of success indicators. The application of the developed new multi-criteria decision-making (MCDM) methods can be eliminated or decreased by decision-makers' subjectivity, which leads to consistency or symmetry in the weight values of the criteria. In this Special Issue, 40 research papers and one review study co-authored by 137 researchers from 23 different countries explore aspects of multi-criteria modeling and optimization in crisp or uncertain environments. The papers propose new approaches and elaborate case studies in the following areas of application: MCDM optimization in sustainable engineering, environmental sustainability in engineering processes, sustainable multi-criteria production and logistics processes planning, integrated approaches for modeling processes in engineering, new trends in the multi-criteria evaluation

of sustainable processes, and multi-criteria decision-making in strategic management based on sustainable criteria.

Non-Exhaust Emissions Fulvio Amato, 2018-01-02 Non-Exhaust Emissions: An Urban Air Quality Problem for Public Health comprehensively summarizes the most recent research in the field, also giving guidance on research gaps and future needs to evaluate the health impact and possible remediation of non-exhaust particle emissions. With contributions from some of the major experts and stakeholders in air quality, this book comprehensively defines the state-of-the-art of current knowledge, gaps and future needs for a better understanding of particulate matter (PM) emissions, from non-exhaust sources of road traffic to improve public health. PM is a heterogeneous mix of chemical elements and sources, with road traffic being the major source in large cities. A significant part of these emissions come from non-exhaust processes, such as brake, tire, road wear, and road dust resuspension. While motor exhaust emissions have been successfully reduced by means of regulation, non-exhaust emissions are currently uncontrolled and their importance is destined to increase and become the dominant urban source of particle matter by 2020. Nevertheless, current knowledge on the non-exhaust emissions is still limited. This is an essential book to researchers and advanced students from a broad range of disciplines, such as public health, toxicology, atmospheric sciences, environmental sciences, atmospheric chemistry and physics, geochemistry, epidemiology, built environment, road and vehicle engineering, and city planning. In addition, European and local authorities responsible for air quality and those in the industrial sectors related to vehicle and brake manufacturing and technological remediation measures will also find the book valuable. - Acts as the first book to explore the health impacts of non-exhaust emissions - Authored by experts from several sectors, including academia, industry and policy - Gathers the relevant body of literature and information, defining the current knowledge, gaps and future needs

Sustainable Neighbourhoods for Ageing in Place Nestor Asiamah, Hafiz T.A. Khan, Pablo Villalobos Dintrans, Mohammad Javad Koohsari, Emmanuel Mogaji, Edgar Ramos Vieira, Ruth Lowry, Henry Kofi Mensah, 2023-11-10 This timely book provides an understanding of how an ageing population can maintain health in the ageing process in their preferred homes and neighbourhoods while coping with global crises of climate change events, infectious diseases, systemic violence, and radical or extreme industrialisation. It is the first-known volume to consider the four crises as health and social threats to healthy longevity from a sustainability perspective. The book is a collection of commentaries, theoretical frameworks, case studies, and empirical evidence that: (1) provides an analysis of how the crises affect neighbourhood attributes and the ability of residents to use them to maintain health while living in their preferred neighbourhoods, and (2) suggests potential interventions for enabling residents to utilise these attributes for health while living at home in contexts experiencing the crises. Contributions are authored by scholars and practitioners from various disciplines including public health, health care, architecture, engineering, human resources development, information technology, and finance. Among

the topics covered: The Impact of Crises on Older Adults' Health and Function: An Intergenerational Perspective A Behavioural Approach to Sustainable Neighbourhoods: A Philosophical Construction of a Friendly Neighbourhood Assistive Technologies for Ageing in Place: A Theoretical Proposition of Human Development Postulates "Sustainable Ageing" in a World of Crises Sustainable Neighbourhoods for Ageing in Place: An Interdisciplinary Voice Against Global Crises serves as both a primary and secondary text particularly suited for post-graduate level study (e.g., MSc, PhD). Each chapter richly describes events, phenomena and models in a way that fits contemporary curricula for students and instructors in sociology, gerontology, architecture, environmental science studies, sustainability, ageing studies, and public health. Researchers in a broad range of disciplines can use the book as a research guide to design their studies based on models and insights described in its contents. With theoretical frameworks and recommendations from this book, stakeholders can understand what a sustainable neighbourhood is in the context of crises by presenting problems and solutions from different countries and disciplines.

Public-Private Partnerships in Urban Bus Systems Alejandro Hoyos Guerrero, Abel Lopez Dodero, 2021-06-25 Many cities have sought to replicate the urban bus public-private partnership (PPP) structures that succeeded at the beginning of the millennia, such as those implemented in Brazil, Colombia, and Mexico. These cities improved their public transportation systems in the face of rapid urbanization, rising air pollution, and increasing road safety incidents through these PPP interventions. Examining these past international experiences, and others, *Public-Private Partnerships in Urban Bus Systems: An Analytical Framework for Project Identification and Preparation* first challenges the assumption that PPP structures are always the optimal approach for improving urban bus systems. The authors use relevant case studies to demonstrate that structuring such PPPs in cities in the developing world requires tailor-made interventions that respond to local contexts. The authors identify essential elements for PPP feasibility and invite readers to consider alternative solutions for achieving the desired objectives. This book presents an analytical framework that public transportation practitioners can use to support the process of identifying and preparing appropriate technical, financial, and legal structures to improve urban mobility if a PPP is the preferred solution. It follows a detailed, risk-based approach to thoroughly analyze the challenges that might be experienced by cities that pursue private participation in proposed urban bus interventions. Using specific examples, the authors thoroughly analyze the risks and the specific potential planning-stage challenges likely to be encountered and suggest strategies for practitioners to respond to the local contexts and the various alternative solutions. This study builds upon international experiences, predominantly in Latin America and in PPPs focused on streamlining fleet provision and

operation. Finally, the book helps to identify and define bankable project structures that could respond well to local contexts and minimize risks.

Research Tracks in Urbanism: Dynamics, Planning and Design in Contemporary Urban Territories Alessia Allegri, Angélica Benatti Alvim, Eunice Helena Abascal, Joaquin Sabaté, João Pedro Costa, Maria Cristina Schicchi, 2021-09-13
Maybe the Global Village metaphor has never been more accurate than it is today, where societies join forces in the fight against the COVID 19 pandemic, in a global coordinated effort, possibly never tested before in the known history of Humankind. Although we are sure that in the past some other shared demands have united the different peoples of the world, this has never been so strongly necessary, mainly in what the global scientific community is concerned. This is a fight for the survival of a society. However, we should not lose sight of what we are fighting for. We fight together for people. Not just for the abstract value of Human life, but for life in society as a whole, including its moral and ethical aspects. The topics of this book are based on this claim, on what makes it possible. We do not build our lives in a vacuum, or in distant Invisible Cities, but through a higher value, which represents physical life in society: the City, built by the discipline of Urbanism. This book is a spin-off of the International Research Seminar on Urbanism_SIIU2020. Inspired by the contents of twelve research seminars, a group of researchers from the universities of Barcelona, Lisbon and São Paulo discuss the contemporary agenda of research in Urbanism. Following the conference, a selection of 35 original double-blind peer-reviewed research papers were brought together with different perspectives about such an agenda.

Ordenar los territorios Alice Beuf, Patricia Rincón Avellaneda, 2017 El ordenamiento territorial es mucho más que el conjunto de normas e instrumentos de gestión y planificación de los usos del suelo. Si bien está reglamentado en tanto competencia estatal, reivindicamos que las acciones (y omisiones) con gran capacidad de transformación socioespacial de los territorios se dan en diversos ámbitos: políticas sectoriales, estrategias empresariales e iniciativas de las comunidades locales, entre otros. Puede que los objetivos territoriales no sean explícitos, puede que algunas acciones no estén relacionadas directamente con un proyecto territorial, pero, a menudo, derriban los Planes de Ordenamiento Territorial legalmente formulados. Por lo tanto, es menester profundizar lo que significa, lo que implica ordenar los territorios, y replantear esta cuestión como un objeto propio de las ciencias sociales. A lo largo de este libro, fruto de un seminario interdisciplinario que reunió ponentes de toda Latinoamérica y España, nos adentramos en muchas de las dimensiones

sociales, culturales, políticas, económicas y ambientales involucradas a la hora de ordenar los territorios.
