**100 cose da sapere per volare sereni** Alberto Pellai,Giuseppe Lapenta,2016-05-31 Imparate a essere piloti della vostra mente e ad assumerne il controllo! Volare significa essere sradicati da terra, non avere più alcun controllo ed essere completamente nelle mani di altri. Per qualcuno questa può essere una situazione tutt'altro che abitudinaria, una condizione vissuta con disagio, se non addirittura con ansia. Ma la paura di volare può essere vinta; è sufficiente che la nostra sfera razionale dialoghi con la sfera emotiva del cervello: solo così possiamo gestire e regolare l'emozione. In questo libro Alberto Pellai, psicologo e noto divulgatore scientifico, e Giuseppe Lapenta, comandante di linea, vi condurranno per mano in un viaggio alla scoperta della natura della vostra ansia e dei segreti della cabina di pilotaggio, per capire cosa succede realmente - anche nella vostra testa - durante rullaggio, decollo, turbolenze e atterraggi. L'opera è arricchita da test e strumenti di rilassamento e autovalutazione, e da curiose rubriche che raccontano le emozioni di chi sale a bordo di un velivolo. Un manuale agile e irrinunciabile per tutti coloro che usano l'aereo ma faticano a superare l'ansia del volo, per affrontare il viaggio con maggior serenità e consapevolezza.

**No Fragmentation.** Bruno Del Medico,2025-11-11 In the 17th century, European science laid the foundations for modern rational thought. During those years, thanks to Newton and Descartes, a mechanical view of reality took shape: the

universe as a giant clock. The Enlightenment consecrated this approach. The human mind was proposed as the supreme instrument of understanding. Diderot compiled the Encyclopédie as a map of all human knowledge. Science relied on separation and classification. Everything seemed comprehensible only by dividing matter and phenomena into ever smaller parts. However, the 20th century marks a break. With quantum physics, the concept of the isolated object loses its solidity. In 1927, Werner Heisenberg formulates the uncertainty principle. Niels Bohr states that the observer and the observed are inseparable. Particles do not simply be in one place: they exist as probabilities, relationships, fields of interaction. Reality is not like a clock. It is more like a wave that passes through everything. These insights are surprisingly in dialogue with certain philosophical traditions. In the Tao Te Ching, attributed to Laozi, the universe is not a collection of parts, but a single flow, a Tao. In Buddhist thought, the idea of interbeing dissolves the rigid boundaries of the individual. Even in the West, philosophers such as Spinoza and Whitehead have suggested a relational view, in which each entity is defined by its relationship to the whole. The paradox is that we still live in an age obsessed with fragmentation. Politics is divided into irreconcilable factions. Scientific disciplines struggle to communicate and interconnect with each other. Society is segmented into closed cultures and groups. Even psychology breaks down human beings into separate functions and processes. In this context, unifying thought is not just an intellectual curiosity: it appears as a provocation. Rethinking the universe as a continuous fabric may not be an abstract luxury, but a cultural necessity. As physicist David Bohm, a student of Einstein, wrote: Fragmentation is the main problem of humanity. Perhaps it is time to return to looking not only at the gears, but at the mystery of the movement that holds them together. Let's imagine transposing the insights of quantum physics and unitary philosophies into everyday life. The first impact would be a change in language. The words we use are not neutral: they define what we think is real. If we said system instead of object, relationship instead of boundary, our perception would be transformed. In physics, this conceptual revolution has already produced powerful tools. Lasers, semiconductors, and magnetic resonance imaging would not be possible without the idea that matter is a field of invisible interactions. Similarly, in biology, the network of relationships between ecosystems challenges the old causal determinism: the bee is not just an insect, but a vital node in the fabric of the entire planet. On a social level, thinking in terms of interconnection can become a strategy for addressing global crises. Climate change, pandemics, and food security are not someone else's problems: they belong to a single planetary system. Even in psychology, a unifying approach can redefine key concepts. Carl Gustav Jung saw the individual as part of a collective unconscious. More recently, social neuroscience shows that the human brain is programmed for empathic connections. The self and the other are not separate universes: they share a common emotional and cognitive territory. The absence of fragmentation is not a mystical dream or . It is a direction of travel. Many chapters of the book are devoted to providing useful suggestions for integrating unity into personal and social life.

*Individuation and Liberty in a Globalized World* Stefano Carpani, 2022-06-07 What is the best way to understand the

narratives of self-identity at the beginning of the 21st century? This interdisciplinary collection brings together perspectives from analytical psychology, sociology, psychiatry, psychosocial studies, and psychoanalysis to consider questions about individuation and freedom in our unhinged world. The contributors discuss the meaning of, and need for, individuation in individualized and liquid societies. The book begins with a comparison of three approaches: C.G. Jung's individuation, Ulrich Beck's individualization, and Zygmunt Bauman's liquidity. This sets the tone for further consideration of topics including guilt, social media, global nomads, and surveillance. Theoretical reflections are enhanced by clinical material, and the book emphasizes the connections between sociology and psychoanalysis, offering significant insights into the importance of psychosocial approaches. This timely work will be of great interest to academics and scholars of psychosocial studies, Jungian studies, sociology, and politics.
