Modern Applied Statistics with S W.N. Venables, B.D. Ripley, 2013-03-09 S is a powerful environment for the statistical and graphical analysis of data. It provides the tools to implement many statistical ideas that have been made possible by the widespread availability of workstations having good graphics and computational capabilities. This book is a guide to using S environments to perform statistical analyses and provides both an introduction to the use of S and a course in modern statistical methods. Implementations of S are available commercially in S-PLUS(R) workstations and as the Open Source R for a wide range of computer systems. The aim of this book is to show how to use S as a powerful and graphical data analysis system. Readers are assumed to have a basic grounding in statistics, and so the book is intended for would-be users of S-PLUS or R and both students and researchers using statistics. Throughout, the emphasis is on presenting practical problems and full analyses of real data sets. Many of the methods discussed are state of the art approaches to topics such as linear, nonlinear and smooth regression models, tree-based methods, multivariate analysis, pattern recognition, survival analysis, time series and spatial statistics. Throughout modern techniques such as robust methods, non-parametric smoothing and bootstrapping are used where appropriate. This fourth edition is intended for users of S-PLUS 6.0 or R 1.5.0 or later. A substantial change from the third edition is updating for the current versions of S-PLUS and adding coverage of R. The introductory material has been rewritten to emphasize the import, export and manipulation of data. Increased computational power allows even more computer-intensive methods to be used, and methods such as GLMMs,

Post-Tsunami Reconstruction in Indonesia Marjaana Jauhola, 2013-06-26 This book offers a critical analysis of gender mainstreaming initiatives in the post-tsunami context in Indonesia. Aiming to challenge the terms of the debate in gender

mainstreaming and disaster reconstruction efforts, Jauhola offers an important contribution for the discussion of what 'feminisms and disasters' could be. The work provides an in-depth analysis of three governmental practices of gender mainstreaming: the use of the concept pair sex/gender; the use of gender analysis and the use of project management tools and local subversion that challenges the potential normative violence of gender mainstreaming. Providing feminist intersectional reading of gender mainstreaming the book aims to illustrate that this framework does not lack political alternatives, but rather, it offers an alternative focus for feminism and for the re-conceptualisation of 'political', and provides tools for practitioners of aid aiming to come to grips with the complexity of gender equality policy agenda and its potential violent social consequences in global politics. Drawing on extensive field research in Aceh, this text is one of the first book length studies, and thus provides a significant addition to Indonesian literatures on intersectional analysis of gender, religion, heteronormativity, and feminist subversive practice. It is a vital resource for those interested in understanding global interconnections of localised disaster and conflict reconstruction.

Guidelines on Active Content and Mobile Code Wayne A. Jansen, 2010 The private and public sectors depend heavily upon info. tech. systems to perform essential, mission-critical functions. As existing technology evolves and new technologies are introduced to provide improved capabilities and advanced features in systems, new technology-related vulnerabilities often arise. Organizations implementing and using advanced technologies must be on guard. One such category of technologies is active content, which refers to electronic documents that can carry out or trigger actions automatically without an individual directly or knowingly invoking the actions. Exploits based on vulnerabilities in active content technologies can be insidious. This report recommends key guidelines for dealing with active content. Illus.

Legal Protection for Computer-Implemented Inventions Sabine Kruspig, Claudia Schwarz, 2016-04-24 As a result of the incorporation of computer software into countless commercial and industrial products, the patentability of software has become a vital issue in intellectual property law. This indispensable book provides an overview on the current status of computer-implemented inventions in patent law across Europe and major jurisdictions worldwide. A hugely practical field research tool with guidance based on case law, it examines the major hurdles in each particular country and describes the best practice to be adopted. Clearly showing how enforceable software patent applications can be competitively drafted and how a patent portfolio for computer-implemented inventions can be established in several countries without spending money

unnecessarily on problematic examination proceedings, this book covers such issues and topics as the following: • claim categories for patent applications; • sufficient level of abstraction/breadth of the claimed invention; • fundamental terms of computing and terminological traps; • probability for patents dependent on software application areas; and • patents in core areas of computing. With separate chapters for the key countries, Germany, the United Kingdom, France, the United States, China, Korea, Japan, India, and the European Patent Office the legal situation for computer-implemented inventions in each country or region, this book includes guidance on prosecution under national law, analyses of relevant court decisions, practice checklists, and an outlook on future developments.. The authors describe claim formulation based on actual cases and on principles of computer science in order to show what might be or might not be patentable in each jurisdiction. With this incomparable resource, patent attorneys and patent professionals in companies will get a basis for making decisions about the most appropriate jurisdictions in which to file patent applications. This book will also be of great value to computer professionals who are affected by the protection of software or who are actively involved in the protection of software by patent law.

Ramadan in Java André Möller, 2005 The dissertation aims at reducing this gap in the literature on Islamic cultures, and provides its readers with ways of approaching and understanding Ramadan - and various different Islamic phenomena - in Indonesia and in other parts of the Muslim world. It is argued that we preferably may approach Islam from three different angles, that is, to discuss it from the normative, the written, and the lived perspectives respectively. In this study, thorough attention is thus directed not only to the classical and normative Islamic texts and the lived reality in Java, but also to the popular and contemporary Indonesian literature on Ramadan.
