*Estimating and Cost Planning Using the New Rules of Measurement* Sean D. C. Ostrowski, 2013-09-10 Estimating and Cost Planning Using the New Rules of Measurement The RICS New Rules of Measurement mean that the construction industry now has a way of allowing a more consistent approach to the measurement and estimating of buildings from the start of a project, right through until the end, and beyond. Estimating and Cost Planning Using the New Rules of Measurement offers comprehensive guidance on all the technical competencies concerned with estimating throughout the precontract stages. It provides a full commentary to the NRM, with detailed and comprehensive examples of how to measure estimates and cost plans in accordance with this new prescriptive approach. For both students and practitioners, the acquisition of technical competencies is by practice so this book offers step-by-step worked examples to follow as well as an exercise on each topic. Contents Introduction A Practical Introduction to Measurement Code of Measuring Practice How to Use the New Rules of Measurement 1 NRM 1 Estimates NRM 1 Cost Plans Information Preliminaries, Risk, Overheads and Profit Unit Rates Cost Analyses Helps dispel anxieties about using a new method in an important area of fee generation. Based on the author's successful Roadshows, organised by the RICS to promote the NRM. RICS New Rules of Measurement ,2012 e rules have been written to provide a standard set of measurement rules that

are understandable by all those involved in a construction project. They provide advice and best practice guidance to RICS members involved in the cost management of construction projects worldwide. This volume, NRM 2: detailed method of measurement for capital building works, provides fundamental guidance on the detailed measurement and description of building works for the purpose of obtaining a tender price. The rules address all aspects of bill of quantities (BQ) production, including setting out the information required from the employer and other construction consultants to enable a BQ to be prepared, as well as dealing with the quantification of non-measurable work items, contractor designed works and risks. Guidance is also provided the content, structure and format of BQ, as well as the benefits and uses of BQ

*RICS New Rules of Measurement ,2012* The RICS new rules of measurement are a suite of documents issued by the RICS Quantity Surveying and Construction Professional Group. The rules have been written to provide a standard set of measurement rules that are understandable by all those involved in a construction project. They provide advice and best practice guidance to RICS members involved in the cost management of construction projects worldwide. This volume, the RICS new rules of measurement: Order of cost estimating and elemental cost planning, provides fundamental guidance on the quantification of building works for the purpose of preparing cost estimates and cost plans. Direction on how to quantify other items forming part of the cost of a construction project, but which are not reflected in the measurable building work items, is also provided - i.e. preliminaries, overheads and profit, project team and design team fees, risk allowances, inflation, and other development and project costs.

Building Measurement Andrew Packer,2016-11-18 Measurement of buildings is the core skill of the quantity surveyor. It underpins the procurement, management, delivery and subsequent commissioning of a completed building, and must now be completed using New Rules of Measurement 2 (NRM 2). In this much-needed new measurement textbook, the measurement of the most common building elements is described using NRM2. Extensive worked examples including fully up to date hand-drawn diagrams and supporting take-off lists ensure that the reader develops a confidence in their ability to measure using NRM2 in practice. A practical step-by-step approach is used to explain and interpret the detail of the specific Work Sections of NRM2, covering a broad range of different trades, including mechanical and electrical systems; external works; groundwork; masonry; joinery; and internal finishes. Presuming no prior knowledge of measurement or NRM2, and fully up to date with current practice, including consideration of Building Information Modelling, this is the ideal text for students of measurement at HND or BSc level, as well as practitioners needing a crash course in how to apply NRM2.
