**Denise F. Polit, Cheryl Tatano Beck**

**Nursing Research** Denise F. Polit, Cheryl Tatano Beck, 2020-02-12 Research methodology is a dynamic enterprise. Even after writing 10 editions of this book, we have continued to draw new material and inspiration from ground-breaking advances in research methods and in nurse researchers' use of those methods. It is thrilling to share many of those developments in this new edition. We expect that many of the new methodologic and technological enhancements will be translated into powerful evidence for nursing practice. Four years ago, we considered the 10th edition as a watershed edition of a classic textbook, having added two new chapters. We are persuaded, however, that this 11th edition is even better than the previous one. We have retained many features that made this book a classic textbook and resource, including its focus on research as a support for evidence-based nursing, but have introduced important innovations that we hope will help to shape the future of nursing research--

**Learning Cultural Competence in Healthcare** Jane Holstein, 2025-03-24 Background Healthcare in Sweden must provide equitable and effective care to all residents by adapting to an aging and multicultural population with varied needs. To achieve this, increased cultural competence among healthcare professionals is required. To support healthcare professionals, in developing professional knowledge in encounters with migrant persons a self-rating instrument measuring cultural competence as well as education in cultural competence can equip professionals to meet this need. Improving cultural competence in healthcare can enhance communication and patient satisfaction, reduce misunderstandings and errors, and improve overall healthcare outcomes. However, there is a lack of relevant instruments and education to learn cultural competence across various healthcare areas in Sweden. Aim The general aim of this thesis was to develop and evaluate a self-assessment instrument in cultural competence for healthcare professionals. Further the aim was to design an educational program to enhance cultural competence among healthcare professionals working in interprofessional teams. Methods This thesis consists of four studies, with varied methodology and design. In study I, 19 occupational therapists participated, divided into four focus groups. Qualitative content analysis was used to examine the content validity and utility of the CCAI-S. In study II data was collected by a web-based questionnaire based on CCAI-S to 428 occupational therapists to investigate the construct validity, reliability and utility of the CCAI-S. Factor analysis was performed as well as descriptive statistics. In study III data was collected by a web-based questionnaire based on CCAI-S to measure cultural competence in 279 healthcare professionals in interprofessional teams. Data was analyzed with descriptive statistics, univariate analyses and linear regression. Study IV used a co-design methodology, in which healthcare professionals (n =11), patients (n =6) and researchers (n =5) collaborated to develop an educational programme in cultural competence. The analysis in the process was integrated with data collection through an iterative and agile approach. Results The CCAI-S showed high content validity for all 24 items, though six required reformulation. It demonstrated strong utility for increasing cultural awareness among healthcare professionals and highlighted the importance of organizational support in developing cultural competence. A three-factor model was identified: 'Openness and awareness,' 'Workplace support,' and 'Interaction skills,' with high factor

loadings and strong Cronbach's Alpha support. Even though all 24 items were deemed clinically relevant based on construct validity of CCAI-S led to 13 of 24 items deemed relevant. 58% of healthcare professionals reported high levels of Openness and awareness, 35% high interaction skills, and 6% high workplace support. Cultural competence was linked to a high percentage of migrant clients and prior cultural competence development through experience or education. Professionals felt open and aware but lacked workplace support and education. A prototype of an educational programme with four modules was co-designed: cultural knowledge, reasoning, interaction, and context, each with specific learning objectives and activities to enhance cultural competence in healthcare. Conclusion The CCAI-S demonstrated good measurement properties and high clinical relevance. Most healthcare professionals felt culturally open and aware but needed more workplace support and education to improve their interaction skills and develop cultural competence. The CCAI-S can guide organizations in enhancing staff cultural competence. The educational program's clinical relevance was ensured through co-design by professionals and patients. Fostering cultural competence in healthcare is essential for meeting diverse patient needs. Prioritizing self-assessment and education can lead to a more inclusive and effective healthcare system.

Bakgrund Sjukvården i Sverige måste erbjuda jämlik och effektiv vård till alla invånare genom att anpassa sig till en åldrande och mångkulturell befolkning med olika behov. För att uppnå detta krävs det ökad förståelse och kompetens hos vårdpersonal. Det är särskilt viktigt att hälso-och sjukvårdspersonal kan möta patienternas kulturella behov i ett mångkulturellt samhälle. För att stödja personalen i att utveckla professionell kunskap i möten med migranter kan ett självskattningsinstrument som mäter kulturell kompetens samt utbildning i kulturell kompetens utrusta professionella för att möta detta behov. Detta kan förbättra vården genom att förbättra kommunikationen och öka patienternas tillfredsställelse. Det minskar risken för missförstånd och fel som kan uppstå utifrån kulturella och språkliga skillnader, vilket därmed förbättrar de övergripande resultaten av insatserna. Vidare främjar en sådan utbildning jämlikhet genom att säkerställa att vården är anpassad till de specifika behoven hos den mångkulturella populationen, vilket hjälper till att minska hälsoskillnader. Det finns dock en brist på relevanta instrument och utbildning för att lära sig medvetenhet och utveckla kulturell kompetens inom sjukvårdens olika arbetsplatser i Sverige. Syfte Det övergripande syftet med denna avhandling var att utveckla och utvärdera ett självskattningsinstrument för kulturell kompetens för hälso-och sjukvårdspersonal. Vidare var syftet att utforma ett utbildningsprogram för att förbättra den kulturella kompetensen bland hälso-och sjukvårdspersonal som arbetar i team. Det specifika syftet med studie I var att utvärdera innehållsvaliditeten och användbarheten av CCAI-S bland arbetsterapeuter. Det specifika syftet med studie II var att undersöka den kliniska relevansen, konstruktvaliditeten och reliabiliteten av CCAI-S bland svenska arbetsterapeuter. Det specifika syftet med studie III var att beskriva den upplevda kulturella kompetensen hos primärvårdspersonal som specialiserar sig på diabetesvård och att undersöka relaterade faktorer som påverkar kulturell kompetens. I studie IV var syftet att beskriva utvecklingen av en utbildningsprototyp som förbättrar kulturell kompetens

bland vårdpersonal. Metod Denna avhandling består av fyra delstudier: en med en beskrivande och utforskande design (I), två tvärsnittsbeskrivande studier (II, III) och en co-design-studie (IV). I studie I deltog 19 arbetsterapeuter, uppdelade i fyra fokusgrupper. Kvalitativ innehållsanalys användes för att undersöka innehållsvaliditeten och användbarheten av CCAI-S. I studie II skickades en webbaserad enkät till ett slumpmässigt urval av 428 arbetsterapeuter för att undersöka konstruktvaliditeten, reliabiliteten och användbarheten av CCAI-S. Faktoranalys utfördes samt beskrivande statistik. I studie III sam-lades data in via en webbaserad enkät baserad på den psykometriskt testade CCAI-S för att mäta kulturell kompetens hos 279 sjukvårdspersonal i interprofessionella team. Data analyserades med deskriptiv statistik. Univariata analyser och linjär regression användes för att undersöka sociodemografiska faktorer. Studie IV använde en co-design-metodologi, där sjukvårdspersonal (n = 11), patienter (n = 6) och forskare (n = 5) samarbetade för att utveckla ett utbildningsprogram i kulturell kompetens. Co-design-processen byggde på fem element: engagera, planera, utforska, utveckla och besluta, och datainsamlingen baserades på idégrupper med vårdpersonal och individuella patientintervjuer. Analysen i processen integrerades med datainsamlingen genom ett iterativt och agilt förhållningssätt. Resultat I delstudie I visade alla 24 frågorna i CCAI-S hög innehållsvaliditet, även om sex frågor behövde omformuleras och exemplifieras. Resultaten visade starkt stöd för användbarheten av CCAI-S, där det kunde användas individuellt av personal för att öka medvetenheten om kulturella frågor och hade potential för användning i olika interprofessionella team och arbetsplatser. Även betydelsen av organisatoriskt stöd för hälso-och sjukvårdspersonal i utvecklingen av kulturell kompetens framkom i resultatet. I delstudie II genererade konstruktionsvaliditeten en trefaktormodell med benämningarna 'Öppenhet och medvetenhet', 'Arbetsplatsstöd' och 'Interaktionsfärdigheter'. Alla tre faktorer visade höga faktorladdningar och innehöll 12 av de 24 ursprungliga itemen. Cronbach's alpha visade starkt stöd för trefaktormodellen. Deltagarna rapporterade att alla 24 itemen hade hög klinisk relevans. Resultatet från delstudie III visade att 58% av vårdpersonalen uppfattade att de hade en hög nivå av öppenhet och medvetenhet, 35% uppfattade att de hade en hög nivå av interaktionsfärdigheter och 6% uppfattade att de hade en hög nivå av arbetsplatsstöd. Två faktorer visade sig vara relaterade till kulturell kompetens: en hög andel patienter med migrantbakgrund på kliniken och om personalen tidigare hade utvecklat kulturell kompetens genom praktisk erfarenhet, utbildning och/eller på egen hand. De flesta av personalen ansåg sig vara öppna och kulturellt medvetna när de arbetade med patienter från olika bakgrunder men upplevde brist på arbetsplatsstöd och utbildning för att förbättra sin kulturella kompetens. Resultatet från delstudie IV var en prototyp som bestod av fyra utbildnings-moduler: 1) kulturell kunskap, 2) kulturellt resonemang, 3) kulturell interaktion och 4) kulturell kontext. Varje modul inkluderar lärandemål och aktiviteter. Konklusion Syftet med avhandlingen var att utveckla och utvärdera ett självskattnings-instrument för kulturell kompetens för hälso-och sjukvårdspersonal. Vidare var syftet att utforma en utbildning för att förbättra kulturell kompetens bland interprofessionella team i hälso-och sjukvård. Resultaten visade goda psykometriska egenskaper och hög klinisk relevans för CCAI-S. Baserat på

CCAI-S kände majoriteten av personalen sig kulturellt öppna och medvetna, men de behövde mer arbetsplatsstöd för att förbättra sina inter-aktionsfärdigheter samt utbildning för att utveckla kulturell kompetens. CCAI-S kan vägleda organisationer i att utveckla kulturell kompetens hos sin personal. Utbildningens kliniska relevans för hälso-och sjukvården säkerställdes genom att personal och patienter genom co-design skapade relevant innehåll och lärandeaktiviteter för utveckling av kulturell kompetens. Sammanfattningsvis är det viktigt att främja kulturell kompetens inom hälso-och sjukvården för att möta behoven hos olika patientgrupper. Genom att prioritera självskattning och utbildning kan vi arbeta mot ett mer inkluderande och effektivt vårdssystem.
