Forecasting Forest Futures Hamish Kimmins, Juan A. Blanco, 2010-09-23 Modelling is an important tool for understanding the complexity of forest ecosystems and the variety of interactions of ecosystem components, processes and values. This book describes the hybrid approach to modelling forest ecosystems and their possible response to natural and management-induced disturbance. The book describes the FORECAST family of ecosystem management models at three different spatial scales (tree, stand and landscape), and compares them with alternative models at these three spatial scales. The book will help forest managers to understand what to expect from ecosystem-based forest models; serve as a tool for use in teaching about sustainability, scenario analysis and value trade-offs in natural resources management; and assist policy makers, managers and researches working in assessment of sustainable forest management and ecosystem management. Several real-life examples of using the FORECAST family of models in forest management and other applications are presented from countries including Canada, China, Spain and the USA, to illustrate the concepts described in the text. The book also demonstrates how these models can be extended for scenario and value trade-off analysis through visualization and educational or management games.

Uncertainty in Teacher Education Futures Sandy Schuck, Peter Aubusson, Kevin Burden, Sue Brindley, 2018-02-16 This book discusses the use of futures methodologies to examine and critique teacher education and investigate drivers of change in teacher education contexts, providing readers with futures tools that they can use to explore curricula and pedagogies. It explains futures methods, including scenario development and backcasting, and illustrates them with examples of research in science, technology and mathematics education contexts. By allowing the long-term influence of current trends to be

considered and providing an opportunity to reflect on the present and imagine the future, scenarios provoke discussion on the directions that teacher education might take now. The book offers insights into the possibilities that might exist for teacher education futures and into how scenario building and planning can be used to inform debates about the present. Further, it suggests ways in which readers can influence the future of teacher education through understanding the drivers of change.

Predicting Future Oceans William Cheung,Yoshitaka Ota,Andres Cisneros-Montemayor,2019-08-17 Predicting Future Oceans: Sustainability of Ocean and Human Systems Amidst Global Environmental Change provides a synthesis of our knowledge of the future state of the oceans. The editors undertake the challenge of integrating diverse perspectives—from oceanography to anthropology—to exhibit the changes in ecological conditions and their socioeconomic implications. Each contributing author provides a novel perspective, with the book as a whole collating scholarly understandings of future oceans and coastal communities across the world. The diverse perspectives, syntheses and state-of-the-art natural and social sciences contributions are led by past and current research fellows and principal investigators of the Nereus Program network. This includes members at 17 leading research institutes, addressing themes such as oceanography, biodiversity, fisheries, mariculture production, economics, pollution, public health and marine policy. This book is a comprehensive resource for senior undergraduate and postgraduate readers studying social and natural science, as well as practitioners working in the field of natural resources management and marine conservation. - Provides a synthesis of our knowledge on the future state of the oceans - Includes recommendations on how to move forwards - Highlights key social aspects linked to ocean ecosystems, including health, equity and sovereignty
