Research Methods in Physical Activity and Health Stephen R. Bird, 2018-12-07
Physical activity is vital for good health. It has an established strong evidence base for its positive effects on functional capacity, reducing the risk of many chronic diseases, and promoting physical, mental and social well-being. Furthermore, these benefits are evident across a diversity of ages, groups and populations. The need for these benefits in current societies means that exercise practitioners, professional bodies, institutions, health authorities and governments require high quality evidence to establish appropriate exercise guidelines, implementation strategies and effective exercise prescription at individual, group and population levels. *Research Methods in Physical Activity and Health* is the first book to comprehensively present the issues associated with physical activity and health research and outline methods available along with considerations of the issues associated with these methods and working with particular groups. The book outlines the historical and scientific context of physical activity and health research before working through the full research process, from generating literature reviews and devising a research proposal, through selecting a research methodology and quantifying physical activity and outcome measures, to disseminating findings. Including a full section on conducting research studies with special populations, the book includes chapters on: Observational and cross-sectional studies; Interviews, questionnaires and focus groups; Qualitative and quantitative research methods; Epidemiological research methods; Physical activity interventions and sedentary behaviour;

and Working with children, older people, indigenous groups, LGBTI groups, and those with physical and mental health issues. *Research Methods in Physical Activity and Health* is the only book to approach the full range of physical activity research methods from a health perspective. It is essential reading for any undergraduate student conducting a research project or taking applied research modules in physical activity and health, graduate students of epidemiology, public health, exercise psychology or exercise physiology with a physical activity and health focus, or practicing researchers in the area.

Researching Difference in Sport and Physical Activity Richard Medcalf,Chris Mackintosh,2019-11-29 Researching Difference in Sport and Physical Activity goes beyond the content of introductory research methods texts to provide an insight into the methodological hurdles that are experienced when researching 'difference' in Sport and Physical Activity. Contributors reflect upon how the rhetoric of research methodology transfers into the reality of data collection across 'difference'. Presenting case studies of real research projects, the book covers a range of topics, such as: disability in sport and physical activity vulnerable children in sport and physical activity visual research tools when working with children in a primary school setting physical activity, sedentary behaviour and obesity through childhood diverse ethnic groups in sport and physical activity settings. Each chapter contends with practical issues of power and representation within the research process, to recognise how a researcher-participant relationship that considers those who are 'othered' serves to change the dynamics and processes of research. This is an important resource for students of all sports related subjects and essential reading for anyone interested in the study of marginalised populations in sport and physical activity.
