

What Is The Eponym For Pancreatoduodenectomy

Roman Wölfel

The Surgery of Childhood Tumors Robert Carachi, Jay L. Grosfeld, 2016-04-28 Beginning with the scientific basis of tumors, this book provides up-to-date information on epidemiology, cytogenetics, and molecular biology, before examining current treatments for the full range of pediatric tumors. Integration of surgery, neoadjuvant and adjuvant chemotherapy, and radiation therapy is a dominant theme. In addition, chapters on supportive care, palliative care, and the role of parents' associations reflect the book's holistic approach. All chapters are written by world-renowned international authorities on pediatric cancer from major children's cancer groups. Excellent full-color pictures and line drawings illustrate all aspects of managing childhood tumors, including details of operative techniques neglected in many other texts. This comprehensive book, expanded and updated to encompass the very latest developments and strategies, provides a contemporary approach for pediatric, general, and urological surgeons dealing with childhood tumors.

Pancreatoduodenectomy Fujio Hanyu, Ken Takasaki, 2012-12-06 Alessandro Condivilla of Bologna first attempted a resection of the head of the pancreas in 1898, but several decades of further trial-and-error attempts ensued before the prototype procedure of pancreatoduodenectomy (PD) was established by Whipple in 1935. In the half-century following that landmark, refinements of surgical technique, including pancreatico- and bilio-entero anastomosis as well as development of new technology to support perioperative management and patient care have contributed to the decrease in mortality and morbidity rates for obstructive jaundice and pancreatic fistula. The improvement in mortality and morbidity rates associated with PD has led to an increase in the number of patients undergoing the procedure and in the number of institutions performing it. Indications for PD have also been expanded. In the early years after PD was established as a viable procedure, periampullary carcinoma was the most common indication; now PD is indicated for a number of benign and malignant diseases. Some surgeons believe that PD is the procedure of choice for certain types of chronic pancreatitis, pancreatico-

biliary maljunction, and pancreatic and duodenal trauma. Other surgeons have reported the necessity of PD for lymph node dissection of gallbladder carcinoma. Consequently, the basic procedure has been greatly modified to accommodate the specific conditions of each disease. For patients with malignancy, extended procedures have been developed to improve the curative resection rate and ensure complete lymph node dissection.
