**Pediatric Neurosurgery** Dr Nathan Selden,Dr Lissa Baird,2018-12-15 Part of the Neurosurgery by Example series, this volume on pediatric neurosurgery presents exemplary cases in which renowned authors guide readers through the assessment and planning, decision making, surgical procedure, after care, and complication management of common and uncommon disorders. As pediatric neurosurgery approximates the anatomical and pathophysiological breadth of all specialty areas of adult neurosurgery, the cases provided are exemplary of those that are more relevant to, and seen in higher frequency, in pediatrics. The cases also demonstrate presentation and management appropriate for pediatrics, as both are distinct in pediatric compared to adult neurosurgery. Each chapter also contains 'pivot points' that illuminate changes required to manage patients in alternate or atypical situations, and pearls for accurate diagnosis, successful treatment, and effective complication management. Containing a focused review of medical evidence and expected outcomes, Pediatric Neurosurgery is appropriate for neurosurgeons who wish to learn more about a subspecialty, and those preparing for the American Board of Neurological Surgery oral examination.

**Common Neurosurgical Conditions in the Pediatric Practice** Jeffrey P. Greenfield, Caroline B. Long, 2016-09-15 This unique title is designed to illustrate and foster how a closer working relationship between pediatricians and subspecialists can make childhood medicine work more seamlessly. Despite the common lack of training for pediatricians in pediatric neurosurgery, they are challenged almost daily with caring for children with neurologic conditions. *Common Neurological Conditions in the Pediatric Practice* is replete with a wide range of instructional case vignettes and is organized into sections that loosely approximate the neurologic development of a child and address issues that are commonly encountered. The first section reviews neurologic development and birth related trauma commonly seen in the neonatal intensive care unit. The second part addresses findings commonly encountered by a pediatrician in a child's first month of life. The third section is a comprehensive review of hydrocephalus. Part four describes state of the art imaging techniques for the central nervous system in children, from pre-natal ultrasound through MRI and CT; and the fifth part consists of individual explorations of common neurosurgical conditions that many pediatricians are uncomfortable managing, including brain tumors, spasticity, and vascular lesions to use as a reference tool when caring for a complex neurosurgical patient. Finally a series of chapters related to head trauma, including sections on non-accidental trauma and concussion management, completes the text.
