Aircraft Instrumentation and Systems S. Nagabhushana, 2013-12-30 Aircraft Instrumentation and Systems covers broadly the topics for the undergraduate course on Aircraft Instrumentation. It includes: an introduction to aircraft instruments and systems; air data systems and air data computers; navigation systems; gyroscopic flight instruments; engine instruments; electronics flight instrument systems; safety and warning systems. Every effort has been made to update the contents of the book with information on the most recent technology used in modern transport aircraft manufactured by Boeing and Airbus. The text is profusely illustrated with block diagrams, schematic diagrams, and a number of tables, as well as a glossary. Review questions have been included at the end of the each chapter to help with practice and self-study. The book is intended for both teachers and students, especially students of B.E., M.E. and students in Instrumentation Technology and Aircraft Engineering. It also introduces the subject to practising engineers and readers interested in aircraft instrumentation, as well as to the flight crew.

Guidelines for the Integration of Electronic Engine Control Systems for Transport Category (Part 25) and General Aviation (Part 23) Aircraft E-36 Electronic Engine Controls Committee, 2013 This SAE Aerospace Information Report (AIR) provides methodologies and approaches that have been used to install and integrate full-authority-digital-engine-control (FADEC) systems on transport category aircraft. Although most of the information provided is based on turbofan engines installed on large commercial transports, many of the issues raised are equally applicable to corporate, general aviation, regional and commuter aircraft, and to military installations, particularly when commercial aircraft are employed by military users. The word engine is used to designate the aircraft propulsion system. The engine station designations used in this report are shown in Figure 1. Most of the material concerns an Electronic Engine Control (EEC) with its associated software, and its functional integration with the aircraft. However, the report also addresses the physical environment associated with the EEC and its associated wiring and sensors. Since most of today's transport category engines use dual-channel full-authority digital engine control (FADEC) systems, this is the configuration which is addressed. A typical

FADEC system configuration is shown in Figure 2. As part of the 5-year review process, this revision adds information on the integration of FADEC systems in general aviation (GA) aircraft. It also adds additional information on FADEC control system integration in Transport category aircraft.
