FRANCOIS

Le bâtiment à énergie positive Alain Garnier, 2012-02-02 Dans le neuf comme dans la rénovation, la réglementation européenne s'imposera progressivement aux propriétaires pour que tous les bâtiments d'habitation, individuels ou collectifs, soient moins énergivores. Toutefois, les objectifs visés par les réglementations thermiques en cours et à venir (RT 2012 et 2020) ne pourront être atteints qu'à la condition de modifier non seulement notre façon de concevoir et de construire nos maisons mais aussi notre façon d'y vivre. Dans cette perspective, l'auteur a conçu une gamme complète de systèmes d'économie d'énergie pour les locaux d'habitation. Elle va du BBC (bâtiment à basse consommation) au BEPOS (bâtiment à énergie positive) en passant par le BEPAS (bâtiment à énergie passive). Point par point, exemples à l'appui, il expose ici leur mise en oeuvre. On verra comment, repartant des fondamentaux pour formuler les questions, Alain Garnier propose des solutions à la fois ambitieuses et raisonnables. Traitant du secteur de l'habitat au sens large - les maisons (résidentiel individuel) et les bâtiments (résidentiel collectif) - ce manuel est destiné en priorité aux professionnels du bâtiment : les concepteurs (architectes, urbanistes, ingénieurs et techniciens des bureaux d'études), les économistes, les entreprises, les constructeurs et les exploitants. Chercheurs, enseignants et étudiants y trouveront quant à eux un exposé complet de la problématique dont la collection tient son nom.

Génie électrique - Exercices et problèmes corrigés - Les grandes fonctions de la chaîne d'énergie - IUT, BTS, CPGE (TSI et ATS), écoles d'ingénieurs FRANCOIS, 2018-03-13 Indispensable complément du Cours complet illustré - Les grandes fonctions de la chaîne d'énergie du même auteur aux éditions Ellipses, cet ouvrage s'adresse à tous les étudiants qui souhaitent acquérir, consolider et/ou approfondir leurs connaissances dans le domaine du génie électrique. Il réunit des exercices des problèmes corrigés classés par thème et par difficulté, issus principalement des concours d'entrée en écoles d'ingénieurs (Centrale-Supélec, Mines-Ponts et Concours Communs Polytechniques) pour les classes préparatoires TSI et ATS et des épreuves de sciences de l'ingénieur du baccalauréat général série scientifique (SSI). • Alimentation et stockage de l'énergie - Alimentation par accumulateurs, batteries et supercondensateurs ; - Alimentation par sources d'énergies renouvelables ; - Alimentation monophasée/triphasée. • Distribution et modulation de l'énergie - Conversion statique continu-continu : hacheurs série et réversibles ; - Conversion statique alternatif-continu : redresseurs PD2, PD3 et MLI ; - Conversion statique continu-alternatif : onduleurs de tension. • Conversion électromécanique de l'énergie - Motorisation par

machine à courant continu ; - Motorisation par machine asynchrone triphasée ; - Motorisation par machine synchrone triphasée. • Commande des machines électriques - Asservissement en position ; - Asservissement en vitesse. Ces exercices et problèmes s'adressent, par ailleurs, à tous ceux qui abordent le génie électrique, étudiants des sections de BTS, IUT et des cycles universitaires des écoles d'ingénieurs. Ils sont aussi destinés à tous ceux qui préparent des concours dont le champ d'évaluation est le génie électrique mais aussi aux ingénieurs désireux de mettre à jour leurs connaissances. Les corrigés sont détaillés et accompagnés de nombreuses explications qui permettront à chacun de mieux orienter son travail et d'assimiler pleinement le thème abordé.
