Simplified Signs: A Manual Sign-Communication System for Special Populations, Volume 1. John D. Bonvillian, Nicole Kissane Lee, Tracy T. Dooley, Filip T. Loncke, 2020-07-30 Simplified Signs presents a system of manual sign communication intended for special populations who have had limited success mastering spoken or full sign languages. It is the culmination of over twenty years of research and development by the authors. The Simplified Sign System has been developed and tested for ease of sign comprehension, memorization, and formation by limiting the complexity of the motor skills required to form each sign, and by ensuring that each sign visually resembles the meaning it conveys. Volume 1 outlines the research underpinning and informing the project, and places the Simplified Sign System in a wider context of sign usage, historically and by different populations. Volume 2 presents the lexicon of signs, totalling approximately 1000 signs, each with a clear illustration and a written description of how the sign is formed, as well as a memory aid that connects the sign visually to the meaning that it conveys. While the Simplified Sign System originally was developed to meet the needs of persons with intellectual disabilities, cerebral palsy, autism, or aphasia, it may also assist the communication needs of a wider audience - such as healthcare professionals, aid workers, military personnel, travellers or parents, and children who have not yet mastered spoken language. The system also has been shown to enhance learning for individuals studying a foreign language. Lucid and comprehensive, this work constitutes a valuable resource that will enhance the communicative interactions of many different people, and will be of great interest to researchers and educators alike.

Down's Syndrome J. A. Rondal, 1996 This text provides a comprehensive and authoritative survey of what is currently known about the psychological, psychobiological and socio-educational aspects of Down's syndrome. Drawing together contributions from experts in the relevant fields, the text covers genetics, brain characteristics, ageing and Alzheimer's

disease in relation to Down's syndrome, the life-span development of psychological functions (memory, oral and written language, cognition, learning, affectivity and psychopathology) and major socio-educational issues - school and society integration, and work for Down's syndrome persons. The book should be of interest to students, university teachers and professionals in the fields of psychology, psycholinguistics, genetics, neurology and special education.

Clinical Linguistics Louise Cummings, 2008-02-06 Louise Cummings provides a comprehensive introduction to speech and language therapy which will give SLT students an excellent starting point for a wide range of communication impairments. The Royal College of Speech and Language Therapists estimates that 2.5 million people in the UK have a communication disorder. Of this number, some 800,000 people have a disorder that is so severe that it is hard for anyone outside their immediate families to understand them. In Clinical Linguistics, Louise Cummings provides a comprehensive introduction to speech and language therapy which will give SLT students an excellent starting point for a wide range of communication impairments. In chapters that are dedicated to the discussion of individual communication disorders, Cummings argues that no treatment of this area can reasonably neglect an examination of the prevalence and causes of communication disorders. The assessment and treatment of these disorders by speech and language therapists are discussed at length.

This invaluable resource will help scientists, engineers, and researchers understand and utilize current terminology in almost any field-from aeronautics to zoology. The Cambridge Handbook of Sociocultural Psychology Alberto Rosa,Jaan Valsiner,2018-07-12 Sociocultural psychology is a discipline located at the crossroads between the natural and social sciences and the humanities. This international overview of the field provides an antireductionist and comprehensive account of how experience and behaviour arise from human action with cultural materials in social practices. The outcome is a vision of the dynamics of sociocultural and personal life in which time and developmental constructive transformations are crucial. This second edition provides expanded coverage of how particular cultural artefacts and social practices shape experience and behaviour in the realms of art and aesthetics, economics, history, religion and politics. Special attention is also paid to the development of identity, the self and personhood throughout the lifespan, while retaining the emphasis on experience and development as key features of sociocultural psychology.

More Biology in the Laboratory Doris R. Helms,1989-08-15 [This book] is designed to encourage and give direction to the natural urge to inquire about living things: what they are, and how and why they work as they do ... One intention in writing this manual was to assure that learning in the laboratory need not depend on expensive, elaborately furnished facilities. Thus, requirements for materials and equipment have been kept to a minimum.-Pref.

The Child with Multiple Birth Defects Meyer Michael Cohen,1997 A medical genetics book which came into existence because of the lack of literature on multiple congenital anomaly syndromes, this study incorporates an approach to the patient with multiple anomalies. It deals with the underpinnings of the field of syndromology. Designed for students,residents, fellows, and physicians with an interest in syndromology, this book assumes some general understanding of the rudiments of both medicine and genetics. The author emphasizes the conceptual aspects of syndromology rather than provide an encyclopaedic treatment on specific syndromes -- atopic covered extensively in other textbooks. Since 1982, when the first edition of this monograph came out, the field has advanced dramatically. That is why Cohen has rewritten the entire book, and added new chapters on genetics, teratogens, and facial dysmorphology.
