The Black Flies of Subtropical and Tropical Asia Hiroyuki Takaoka, 2024-07-30 This book uncovers the entire picture of the black fly (Diptera: Simuliidae) fauna in subtropical and tropical Asia (the Oriental Region). Increased discoveries of new species of black flies in the Oriental Region have disclosed a remarkable diversity in terms of phylogenetic lineages and morphological features, particularly adult genitalia and pupal gills. The black fly fauna in the Oriental Region is found to be completely different from those in other regions. The book has two aims, academic and practical. Introduction provides the general information on the biology and effects on human and animal health and welfare of black flies and introduces the unique characteristics of the black fly fauna in this region. Chapter 2 proposes a classification scheme for all 675 named and 44 unnamed species of Oriental black flies, which are placed 11 subgenera and 36 species-groups of the genus *Simulium*. In Chapter 3, synoptic accounts are given for their distribution, bionomics, and taxonomic comments of all the species. In Chapter 4, the faunas of black flies in 15 countries or areas [India, Nepal, Bhutan, Sri Lanka, Myanmar, Thailand, Peninsular Malaysia, Borneo, Sunda Archipelago (Sumatra, Java, Bali, Lombok, Sumbawa, Flores and Timor), East Indonesia (Sulawesi, Maluku Islands and Irian Jaya), Vietnam, Philippines, Taiwan, South China, Nansei Islands (Japan)], are overviewed, and species lists and identification keys for females, males, pupae and larvae, are constructed. Ninety-eight figures of 1,691 line-drawings highlight various unique morphological characteristics of most subgenera and species-groups. Chapters 2 and 3 are academically essential for medical or biological scientists and students to study black flies. Keys to identify species in 15 countries or areas in Chapter 4 are of practical use for health workers for the control of insects of medical and veterinary importance, as well as for ecologists for the study of aquatic invertebrates. Many novel morphological characteristics illustrated in the figures appeal to readers and show the importance of biodiversity of natural terrestrial ecosystems. Contents of this book resulted from the author's taxonomic review of all 719 Oriental species of black flies, with reference to 486 publications.

Marine Bioactive Peptides: Structure, Function, and Therapeutic Potential Tatiana V. Ovchinnikova, 2019-10-25 This Special Issue Book, "Marine Bioactive Peptides: Structure, Function, and Therapeutic Potential" includes up-to-date information regarding bioactive peptides isolated from marine organisms. Marine peptides have been found in various phyla, and their numbers have grown in recent years. These peptides are diverse in structure and possess broad-spectrum activities

that have great potential for medical applications. Various marine peptides are evolutionary ancient molecular factors of innate immunity that play a key role in host defense. A plethora of biological activities, including antibacterial, antifungal, antiviral, anticancer, anticoagulant, endotoxin-binding, immune-modulating, etc., make marine peptides an attractive molecular basis for drug design. This Special Issue Book presents new results in the isolation, structural elucidation, functional characterization, and therapeutic potential evaluation of peptides found in marine organisms. Chemical synthesis and biotechnological production of marine peptides and their mimetics is also a focus of this Special Issue Book.

*Computational Methods in Physics* Simon Širca, Martin Horvat, 2018-06-21 This book is intended to help advanced undergraduate, graduate, and postdoctoral students in their daily work by offering them a compendium of numerical methods. The choice of methods pays significant attention to error estimates, stability and convergence issues, as well as optimization of program execution speeds. Numerous examples are given throughout the chapters, followed by comprehensive end-of-chapter problems with a more pronounced physics background, while less stress is given to the explanation of individual algorithms. The readers are encouraged to develop a certain amount of skepticism and scrutiny instead of blindly following readily available commercial tools. The second edition has been enriched by a chapter on inverse problems dealing with the solution of integral equations, inverse Sturm-Liouville problems, as well as retrospective and recovery problems for partial differential equations. The revised text now includes an introduction to sparse matrix methods, the solution of matrix equations, and pseudospectra of matrices; it discusses the sparse Fourier, non-uniform Fourier and discrete wavelet transformations, the basics of non-linear regression and the Kolmogorov-Smirnov test; it demonstrates the key concepts in solving stiff differential equations and the asymptotics of Sturm-Liouville eigenvalues and eigenfunctions. Among other updates, it also presents the techniques of state-space reconstruction, methods to calculate the matrix exponential, generate random permutations and compute stable derivatives.
