*Engineering Your Future* David Dowling, Roger Hadgraft, Anna Carew, Tim McCarthy, Doug Hargreaves, Caroline Baillie, Sally Male, 2020-01-21 Dowling's *Engineering Your Future: An Australasian Guide*, Fourth Edition is used for first year, core subjects across all Engineering disciplines. Building on the previous editions, this text has been updated with new references, while still maintaining a strong and practical emphasis on skills that are essential for problem solving and design. Numerous topical and locally focused examples of projects across engineering disciplines help demonstrate the role and responsibilities of a professional engineer. Themes of sustainability, ethical practice and effective communication are a constant throughout the text. This full-coloured print with interactive e-text resource has a variety of digital media embedded at the point of learning such as videos and knowledge-check questions to engage students and to help consolidate their learning.

**Engineering Education** Firoz Alam, Alexandra Kootsookos, 2020-12-18 This book details the key concepts, objectives and processes relating to the professional accreditation of engineering bachelor (honours) degrees. The contemporary context of accreditation is examined in terms of the globalised nature of both the engineering profession and higher education. Examples of the processes relating to single and dual accreditation are provided, with examination of the Washington Accord and the requirements of the European Network for Accreditation of Engineering Education. Details are also provided as to how learning outcomes can be structured to demonstrate compliance with accreditation criteria. The final chapters deal briefly with quality assurance processes used in education and the current international quality ranking systems which exist. This book will provide the reader with a detailed examination of outcome based education within the context of Bachelor of Engineering (honours) degrees. A key feature of this book is the side-by-side comparison of different accreditation criteria and a thorough discussion of the relatively new phenomenon of dual accreditation. The book seeks to provide a very clear explanation and exploration of accreditation within the context of engineering education and will benefit those practitioners involved in the accreditation process.

Cycling Futures Jennifer Bonham, Marilyn Johnson, 2015-12-04 The focus of the first half of the book is largely on the current engagement with cycling, challenges faced by existing and would-be cyclists and the issues cycling might address. The second half of the book is concerned with strategies and processes of change. Contributors working from different

ontological positions reflect on changing socio-spatial relations to enable the broadest possible participation in cycling.

Higher Education and Sustainable Development Cheryl Desha, Karlson 'Charlie' Hargroves, 2013-10-08 Responding to the global and unprecedented challenge of capacity building for twenty-first century life, this book is a practical guide for tertiary education institutions to quickly and effectively renew the curriculum towards education for sustainable development. The book begins by exploring why curriculum change has been so slow. It then describes a model for rapid curriculum renewal, highlighting the important roles of setting timeframes, formal and informal leadership, and key components and action strategies. The second part of the book provides detailed coverage of six core elements that have been trialled and peer reviewed by institutions around the world: raising awareness among staff and students mapping graduate attributes auditing the curriculum developing niche degrees, flagship courses and fully integrated programs engaging and catalysing community and student markets integrating curriculum with green campus operations. With input from more than seventy academics and grounded in engineering education experiences, this book will provide academic staff with tools and insights to rapidly align program offerings with the needs of present and future generations of students.

*Engineering the Future* Brian Edmund Lloyd, Clive Ferguson, 2001 The authors of this book consider the future of the profession of engineering. Issues discussed include engineering education, competencies and professional skills/attributes, and the future roles of engineers, following the directives of economic rationalism or contributing to a renewal of civil society by taking responsibility for the social and human, as well as the technical and economic, consequences of their work.
