Wave Energy Convertors in Tropical Seas Zhi Yung Tay,2025-07-30 Tay provides a comprehensive description of the state of the art for recent conceptual designs on the integration of wave energy convertor (WEC) systems with floating structures in tropical seas, discusses the unique environmental challenges, and provides a guide for readers to develop WECs that are optimised for both wave patterns and the structures to which they are attached. Through this book, readers will gain a deep understanding of the unique environmental characteristics of tropical climates, discover how WECs can be integrated into various floating structures, and learn how WECs can be adapted and optimised for use in tropical climates. This book also focuses on the hydroelasticity of large floating structures and how the structural deformation under wave action affects the energy generation of the WEC. Tay provides the theoretical formulation and numerical framework for the modelling of WEC systems when integrated with large floating structures. Different wave models and mathematical optimisation schemes are presented to enable readers to determine the best design and application parameters depending on requirements. In the book, Tay includes case studies to illustrate how power generation of the integrated WEC arrays can be enhanced. This includes power enhancement via sloshing resonance, wave run-up, structural deformation, and various optimisation schemes. These case studies offer reader practical guidance on applying the information in this book to real-world scenarios. The combination of presented case studies, discussion of the challenges of tropical seas, and design optimisation parameters make this book invaluable to researchers and industry players working on the concepts of power enhancement and integrated WECs on floating structures.

Worldwise Learning Carla Marschall, Elizabeth O. Crawford, 2021-08-23 Nautilus Gold Award Winner (Books for a Better World) in Social Sciences & Education Create inclusive, democratic classrooms that prepare knowledgeable, compassionate, and engaged global citizens. Today's global challenges—climate change, food and water insecurity, social and economic inequality, and a global pandemic—demand that educators prepare students to become compassionate, critical thinkers who can explore alternative futures. Their own, others', and the planet's well-being depend on it. Worldwise Learning presents a Pedagogy for People, Planet, and Prosperity that supports K-8 educators in nurturing Worldwise Learners: students who both deeply understand and purposefully act when learning about global challenges. Coupling theory with practice, this book builds educators' understanding of how curriculum and meaningful interdisciplinary learning can be organized around local, global, and intercultural issues, and provides a detailed framework for making those issues come alive in the classroom. Richly illustrated, each innovative chapter asserts a transformational approach to teaching and learning following an original three-part inquiry cycle, and includes: Practical classroom strategies to implement Worldwise Learning at the lesson level, along with tips for scaffolding students' thinking. Images of student work and vignettes of learning experiences that help educators visualize authentic Worldwise Learning moments. Stories that spotlight Worldwise Learning in action from diverse student, teacher, and organization perspectives. An exemplar unit plan that illustrates how the planning process links to and can support teaching and learning about global challenges. QR codes that link to additional lesson and unit plans, educational resources, videos of strategies, and interviews with educators and thought leaders on a companion website, where teachers can discuss topics and share ideas with each other. Worldwise Learning turns students into local and global citizens who feel genuine concern for the world around them, living their learning with intention and purpose. The time is
