Experimental Psychology With Advanced Experiments (in 2 Vols.) M. Rajamanickam, 2004

Experimental Slips and Human Error Bernard J. Baars, 1992-11-30 This work makes three valuable contributions to the study of human slips and errors. It presents current data and theory; it is a complete source for the methodology and results of a 15 year laboratory research program; and it explores the overall architecture of voluntary control. Dr. Baars' work will occupy an important position in the renewed interest in the role of conscious experience in the nervous system.

Cognitive and Computational Aspects of Face Recognition Tim Valentine, 2002-09-26 Just how and why we find some faces memorable but others impossible to recognize is a complex and important question with many practical applications. This edited collection brings together a multi-disciplinary team of researchers to compare and contrast their findings from psychology, computer science, mathematics and neural network research to present a state-of-the-art description of the latest and best of their results in this field. With an international line-up of key researches, this book is an resource for all researchers and advanced students of this topic in each discipline.

Short-term/working Memory Ian Neath, Gordon D. A. Brown, Claudette Fortin, 1999 This special issue of the International Journal of Psychology had its origins in the Quebec 98 Conference on Short-Term Memory, held in Quebec City, Canada, in June 1998. Following this conference, participants were invited to submit contributions based on, and expanding upon, their

presentation at this conference. The enthusiastic response made it possible to collect the exciting selection of articles that you will find herein. It must be noted that because of the finite journal space available, the editors and reviewers were faced with the difficult problem of selecting only a limited number of the excellent articles that were submitted. The outcome of this process is this special issue, which we believe provides an up-to-date overview of current research on short-term/working memory, including the challenges, controversies, and recent theoretical advances in this field.
