Selected Papers in Network and System Administration Eric Anderson,Mark Burgess,Alva Couch,2002 The emergence of network and System Administration, during the latter quarter century, as a discipline of science and engineering, has culminated in a number of paradigms for managing networks of collaborating machines. These include automatic regulation, policy based management, computer immunology, quality control procedures and even the psychology of the user-system interaction. Techniques based on scripting, declarative languages, empirical measurements, and theoretical models, spanning psychology to game theory have been developed. In this volume, key contributions to the discipline are presented through the words of the authors who contributed them. The forum for this thread of ideas has been the USENIX Association's LISA conferences, originally the Large System Administration conference. These conferences have played, and continue to play, a unique role in cementing a relationship between researchers and working network and system administrators. Computer scientists,engineers, system administrators and students will each find something of permanent value here. No matter what developments the future brings, these words represent important conceptual foundations of the field. These papers are reprinted here for the first time in a convenient form, along with a commentary reflecting on their significance within the discipline as a whole.

Infrastructure Development and Public-Private Partnership Susumu Ito,2022-03-27 This is the first book that analyzes public-private partnership (PPP) infrastructure development in developing countries by focusing on recent developments in the Philippines. Infrastructure is extremely important for economic development and poverty reduction. However, given the infrastructure gap and pressures on public expenditure, there is a growing expectation that PPP will fill this gap globally. Over the years, PPP as a mechanism for financing and procuring infrastructure has been the basis of an active and provocative debate in the Philippines, which is known to have inadequate infrastructure—twice in the 2010s, when a significant policy shift on the financing source of public infrastructure was announced by the Philippine government. Drastic policy changes concerning the roles of public finance and PPP in infrastructure development within this decade are not seen in other developing countries. There is no precedent for substantial study on the changes of infrastructure governance in the Philippines, but this book assesses policy changes in infrastructure development in the country and, as academic contributions, identifies several factors behind the changes related to infrastructure governance there, especially the drastic shifts during the Aquino III and Duterte administrations. Furthermore, the findings presented in the book,

always mattered in agriculture. Ever since people have grown crops, raised livestock, and caught fish, they have sought information from one another. Today, ICT represents a tremendous opportunity for rural populations to improve productivity, to enhance food and nutrition security, to access markets, and to find employment opportunities in a revitalized sector. ICT has unleashed incredible potential to improve agriculture, and it has found a foothold even in poor smallholder farms. ICT in Agriculture, Updated Edition is the revised version of the popular ICT in Agriculture e-Sourcebook, first launched in 2011 and designed to support practitioners, decision makers, and development partners who work at the intersection of ICT and agriculture. Our hope is that this updated Sourcebook will be a practical guide to understanding current trends, implementing appropriate interventions, and evaluating the impact of ICT interventions in agricultural programs.
